NEWS IN BRIEF

Trouble looms again at Times

CONFRONTATION at The Times over new technology is again looming, eight months after the newspaper's suspension was ended in relative amity. Times management is pressing the NGA, the typesetters' union, to discuss direct input of text by journalists and advertisement staff, while the union refuses to enter such talks, claiming it has a monopoly of keyboarding for three years.

Prescriptions trial

COMPUTERISATION of part of the Prescription Pricing Authority is to go ahead as a trial to see whether the whole authority should be similarly automated. Studies on alternative ways of doing this have been going for some time (CW, October 18, 1979). The authority pays chemists for the prescriptions they dispense.

Power monitor

THE Hunterston nuclear power station in Scotland is to enhance its plant monitoring system with two Honeywell Level 6 Model 43 systems. Linking with existing 318 real time interface equipment, they will provide plant control room staff with status information about the plant's two reactors and generators.

Data entry boost

SOFTWARE to support data entry and file inquiry at up to three work stations has been added by NCR to its Intel 8080-based B150 office computer. Called Multi Work Station Direct Processing System, the software rents for £330 a month.

COMPUTER WEEKLY

Swedes plan guidelines for technology

A WATCHDOG has been set up by the Swedish government to study how computers are being introduced in Sweden and draw up guidelines for usage and development of new technology. A combined policy for industry, government and society at large will be worked out and when thought necessary legislation will be recommended to Parliament.

The aim of the committee, called the Data Delegation, is to get a clearer idea of what effects computerisation will have on industry, government, and society, covering such areas as unemployment, working conditions, the distribution of power in society,

and privacy. There are already several bodies working on these specific areas in Sweden, and the Data Delegation is to coordinate their efforts.

The delegation does not fit in a formal way into the Swedish constitution but it is considered important enough to have a Cabinet Minister as chairman. Olaf Johansson, the Minister for the Budget. The 15 members consist of MPs from all five parties, regional and local government officials, and trade union representatives. Also there will soon be seven full-time staff.

The committee will probably not have any official power apart from its co-ordinating

role between existing agencies, nor will it have money to spend; its main influence will be in proposing legislation and regulations. Some of the existing agencies, such as the Data Inspection Board, are understood to be worried about interference from the delegation.

Delegation staff say it might have been a good thing had the body been established five years ago. The sort of problems that could have been avoided include eye strain in workers using VDUs and a reduction in the traditional free availability of Swedish government information to citizens since much administration is computerised.

Go-ahead urged for voluntary codes

VOLUNTARY adoption of codes of practice governing personal data in files should go ahead before they are embodied in legislation. This is the recommendation of the National Computer Users Forum, tentatively endorsed by a partial survey of members of the National Computing Centre.

The forum has told the Department of Industry that it is 'gravely concerned about

giving legislative enactment to the proposed codes of practice until sufficient experience is established." The NCC members said that, in the absence of government action, voluntary codes would be acceptable.

Only 10% of NCC members were questioned in the survey. Of the 200 respondents 90% felt there was a need for some form of privacy regulation soon, 75% were in favour of legislation, but only 50% regarded a statutory

data protection authority as essential.

Only half of the members replying had studied the practical implications of the Data Protection Committee's recommendations on their businesses. One-third had assigned responsibility for privacy to someone in their DP departments.

The forum has also recommended that codes of practice should encompass manual systems as well as automated ones, but two forum members — the Central Computers and Telecommunications Agency and the Mail Order Traders Association, dissented from this, stating: "The Mail Order Association and the Building Societies Association both felt that codes should be voluntary and that legislation should 'only be enacted where necessary'".

Sacked salesman sell Jaquard kit

THREE sacked Jaquard salesman and three others have gone into business on their own to distribute the firm's word processing and small business equipment, only weeks after the direct sales operations they worked in closed down (CW, June 12).

The Knightsbridge-based firm, called Wordata, is headed by former Jaquard London branch manager Mario Guzzetti, who was offered a distributorship by his old firm.

OBE for viewdata inventor

INVENTOR of viewdata Sam Fedida has received the OBE in the Queen's Birthday Honours. The award follows closely on that of the MacRobert Award for technological innovation which went to Fedida for his work on Prestel, the Post Office

version of viewdata (CW, December 13, 1979).

Fedida led the Post Office team that developed viewdata in the early Seventies. On his retirement in 1976 he became a consultant to Inac, the NEB subsidiary marketing viewdata in the US. When these operations were extended last year with the formation of a new company, Oregon International, Fedida became technical director. He is now an independent consultant.

Another OBE goes to Steve Shirley, chairman of F International. She founded Prealange Programmers in 1962 to provide part-time work at home for women who were trained programmers but who had given up their jobs to raise families. This proved a highly successful venture and in the early Seventies the company expanded with the establishment of systems operations and changed its name to F International. Mrs Shirley is also a leading member of the BCS specialist group for the disabled.

Other honours include a life peerage for Sir Arnold Weinstock, managing director of GEC.

Fedida. Shirley

and an OBE for Professor Kenneth Hunt, who holds the chair of computer science at the Royal Military College of Science, Shrivenham, Wilts.

An MBE goes to Cecil Rickard, of the Operational Programming Department at the Post Office Telecommunications Headquarters.

GEC picketed

PICKETING began on Tuesday at GEC Telecommunications in Coventry where 200 System X development engineers have been locked out during a dispute about pay and conditions (CW, June 12). ASTMS has made this dispute official.

Denial of Inmos change

• From front page

consideration the options to to. Sirings that may be attached to any further State funding could award the Inmos design to take the whole project to the UK and base all future development at the US site at Colorado Springs.

Although the government appears undecided about the worth of Inmos, the company ahead of the field with its static RAM, the 1M8140, which is expected to start sampling towards the end of this year. Intel, the only company with a comparable product, is understood to have scheduled a sampling of its 2167 for the months of 1981.

That is about the time Inmos hopes to start sampling its 64K dynamic RAM. Design work is also well ahead on memory products.

Work on the company's plant at Chayenne Mountain, Colorado Springs, is up to schedule and planned output will be based on 2,000 wafers a week. Capacity at the projected UK factory will double that.

At present the research work at Bristol employs about 100 people but recruiting has been hindered this year because of the uncertainty of the future of the venture.

Canada books 20 stands at Compec

THE largest stand yet booked at Compec has been reserved by the Canadian government for its Department of Industry, Trade and Commerce.

Nearly 30,000 sq ft, the area of 20 stands, has been reserved for Canadian exhibitors, and many will be taking part in a UK technical exhibition for the first time.

Compec, the UK's major show of computer equipment and development, is at London's Olympia from November 4 to 8. This year's exhibition will be the biggest so far, with the Grand Hall and gallery completely full. So far 380 exhibitors have booked 78 stands and only a few units are now available to enable latecomers to take space.

Last year's record attendance was 34,745, 22% up on 1978, the first year that Compec was held in Olympia. It is expected that 1980 will surpass these totals.

Advance tickets at £1.50 each can be ordered from IPC Exhibitions Ltd, 40 Bowling Green Lane, London, EC1R 0NE. Tickets bought at the door will cost £2.

Briefing \$412m deal for Honeywell

HONEYWELL has been awarded a new 0-year maintenance contract by the Pentagon on the 36 ageing Honeywell 6000 minicomputers that form part of the US Air Force's world wide military command and control system, WWMCCS. The \$412 million contract includes \$100 million worth of hardware updates.

The much criticised WWMCCS achieved further notoriety recently for generating two "Soviet attack" false alarms. They have been attributed to a defective chip.

16-bit Level 6

HONEYWELL is working on a 16-bit microprocessor version of its Level 6 minicomputer, following the path set by Texas Instruments with its TMS 9900 and Data General with its Micronova. Smallest Level 6 processor currently available is the 6/23, which is an AMD 2801 bit-slice emulation of the basic processor.

System 38 Cobol

IBM has announced an Anal 74 Level 2 Cobol compiler for its System 38 business database computer, hitherto only offered with RPG III. The compiler, costing £80.20 a month will be available in 1981.

CSS layoffs

NATIONAL CSS is mulling its computer marketing and time sharing divisions in the US and making big layoffs. The combined division will market both remote time sharing services and the NCSS 3200.

MP calls for national Info Tech plan

A NATIONAL strategy for information technology should be set up by the government right away in order not to let the immense opportunity in this industry "slip between our fingers." That is the proposal put to Industry Secretary Sir Keith Joseph by Kenneth Baker MP, chairman of the Conservative Information Technology committee. Sir Keith reacted sympathetically to the proposals, Baker told CW, and is now awaiting reports on further action by his department.

According to Baker, a single policy document on Information Technology in the UK in the 1980s needs to be produced as an outline of the strategic thinking of the industry, to show the opportunities that exist and how they can be maximised. Baker also reiterated the call for the appointment of a Minister for Information Technology to act as a focal point in government to draw the diverse parts of the industry together.

The government should take a lead by introducing more information technology into its own operations, Baker said, for instance office automation in Whitehall, the

use of Prestel, and more computers in the Health Service. These should all be procured from UK firms.

Baker's other proposals include: adjustment of corporation tax so as not to discriminate against the services industry; an all-UK procurement policy, not just benefiting ICL; increased research and development; and promoting by the new minister of technology agreements with unions.

The new ministerial post would not entail extra bureaucracy, Baker said, because the departments involved already exist.

Ferranti must stay British

THE government will not allow Ferranti to be sold to a foreign company because of its strategic importance as a defence supplier, Industry Secretary Sir Keith Joseph has announced. He has made no other commitment in advance of this week's decision by the Cabinet on how to sell the National Enterprise Board's shares in the company, following publication of its annual results.

Sir Keith made it clear, however, that he dislikes the idea of selling in anyone other than the highest bidder, despite fears that a takeover by a giant such as GEC could lead to the closing down of much of Ferranti. Scottish finance houses have proposed that they should be sold the company under a restrictive covenant that would keep Ferranti independent for an initial period of two or three years.

Staff at Ferranti's Scottish factories are particularly worried about a takeover, and ministers at the Scottish Office, known to be sympathetic, have been pressing this point with Sir Keith.

DEC shortages

A HOLD-UP in the full production of Digital Equipment PDP-11/44s has created a serious shortage of PDP-11/34s according to two of DEC's OEM customers, Bunzl Data Systems and CBS Consultants of Birmingham. The 11/44 is intended to supersede the 11/34 and offers twice the power at only 10% greater cost.

The elements of IBM's new word processor, the Displaywriter, are shown here. Only announced in the US so far, the Displaywriter features a 50,000 word dictionary used for automatic checking of spelling. Users can add another 500 specialist words of their own. The configuration shown here costs about £10,000. More details of the Displaywriter can be found on page 3.

OFT, ICL agreement is 'a sell-out'

AFTER several years of complaints by users and manufacturers, ICL has been forced by the Office of Fair Trading to change some of its practices relating to the maintenance of old machines and the replacement of non-ICL hardware to ICL systems.

However, the changes are far from satisfactory according to some of the complainants, and ICL is still the subject of an investigation by the EEC Commission that started in 1978 (CW, September 21, 1979).

The most significant aspect of ICL's policy not to be changed is the limitation of guaranteed maintenance to seven years on most machines. John Young of Computer Rasale Brokers, the most vociferous of the complainants, has described the agreement between ICL and the OFT as a "sell-out". He said that ICL maintenance policy had rendered old 2800s and 2804s

virtually worthless following the launch of the ME29, and he pointed out that the maximum guaranteed maintenance period on the ME29 was only five years so that ME29s would lose all their value even quicker than 2800s and 2804s.

However, one significant change made by ICL is that it will no longer apply a 20% surcharge for maintaining machines that it agrees to service after the seven-year contractual period is complete. Stuart Gould, chairman of the ICL Computer Users Association, said that this would be welcomed by users but added they would continue to talk to ICL about the maximum guaranteed maintenance period.

The OFT itself said in its statement on the agreement that it reserved the right to reopen its discussions with ICL if "new significant evidence appears".

STC STORAGE TECHNOLOGY

Storage Technology drives ahead

In May STC UK received orders for Sixty 8650 Disk Drives

- The STC 8650 is the equivalent of two IBM 3350s on one spindle.
- 100% software compatible with the IBM 3350.
- Occupies the same floor space.
- Has less heat output.
- Consumes less power.
- Costs much less per megabyte.

Storage Technology manufactures tapes, disks, solid-state disks, and supplies memory for STC 155, 165, 303, 32, 33, 33N.

Downtime

by Chad

Wrong note

I REMEMBER years ago my father trooping around shops after my mother, looking at refrigerators or whatever, and on being shown the latest model with all its fancy features, remarking sourly, "I suppose this one plays a tune."

Nowadays of course, he would be right.

I was strutting past the Shorps stand at an exhibition the other day and there, in and

behind, was an electronic cash register which played a tune.

I asked the chap on the stand what the purpose of the tune-playing was, and he replied with refreshing candour that he had no idea.

The speaker on the machine is principally for repeating to the world in a Defek voice what the total is that is already shown on the digital display.

NORTH THAMES GAS

P.O. Box 45, Wembley, Middlesex HA9 1LB

Previous	Present	Cubic feet	Therms
3824	3873	951	52.024
STANDING CHARGE			930.41

I USED to wonder why it was always the Gas Board that was the butt of computer atrocity jokes. This bill which Mrs Wilson of Edgeware has just received shows why. According to the North Thames Gas Board, 3824-3873=551. Apparently the "present" reading was not estimated but was an actual one. So that is it may, honde up the naughty programmer who forgot his overflow routine!

Date a cow!

WORD reaches me from Ontario that an enterprising firm has started a computer dating service for cows, to enable our bevine friends to find suitable partners for rolling in the hay. I hope it works better than the corresponding human service. I will refrain from making any related remarks about the comparisons these have produced for me.

However, I am reminded of the story about the small boy at the country school who was late one morning. When quizzed about this by teacher he replied, "Oh, I had to take the bull to the cow."

"Can't your father do that?" asked the teacher.

"Oh, no, it has to be the bull," came the answer.

MICHIE'S PRIVATEVIEW

'Man's brain is the computer—his mind is the programmer'

Professor Donald Michie, head of the Machine Intelligence Research Unit at Edinburgh University.

AFTER my arrival at Rugby School at the age of 13, I and a fellow inmate were selected by the Head of House to be his fags (personal slaves) — not, as readers of Tom Brown's School-days might surmise, on account of our personal attractions or fawning demeanour, but because of our known readiness in theological discussion.

Our 17-year-old master, a raven-haired beanstalk with hollow cheeks and tireless intellectual intensity, in later life became a Jesuit priest. Now, however, his restless inquiries were frustrated by total unwillingness on the part of his contemporaries even to listen, let alone discuss with him his concerns about religion.

I and my co-fag, now a companion of the Bar and solicitor to a group of government departments, much preferred a Saturday evening of obligatory theoretical sparring to the normal duties of polishing boots, cleaning windows, blanking belts, scrubbing the floor, and other such chores.

The details have faded, but the antithesis between science and religion was central. Memory returned recently when I took part in the 1980 Science and Religion Forum at Manchester. I was stirred also by memories of a different kind and time on meeting Sir John Eccles at fellow-speaker, new in his belated seventies.

As one small post-graduate dot in a vast crowd, I attended in 1962 the great neurophysiologist's Waynflete Lectures at Oxford. He interweaved profound factual analysis of the brain with dualistic mystification (so we felt) concerning the mind. At his last lecture an extra slide was unaccountably projected on to the screen. Before our eyes hung a brilliantly executed pen-and-ink drawing of Sir John and assistants struggling with a recalcitrant Ghost in the Machine. Some impudent unbeliever had tampered with his slide sequence.

I asked him if this still summarised his position on the mind-brain problem. "You could say today," he answered, "that man's brain is the computer, man's mind is the programmer. A person cannot choose the particular computer God gives him. He must simply do his best with it."

My brief at the forum was not to philosophise, but to give an account of the current state of development of artificial intelligence and its applications. I arranged my presentation so as to emphasise that the ultra-clarer machines of mainstream computing are a great deal more threatening to human autonomy than the humanly responsive creations of AI.

Problems of morality surfaced in a later panel discussion moderated by the Bishop of Durham. For example, once robots have been developed to a sufficient level of intelligence for the question to make sense, should people feel free to mistreat them? My proposal, generally supported, was that the decision can be soundly based on moral grounds quite independent of speculations about consciousness. We can decide that it is wrong to make a sport of teasing cats, without first having to settle such questions as whether a cat is conscious, or has a soul.

The matter will become further complicated at such future time as an expert system can capture the specialist skills of a world expert in such faithful detail that, although he may

now be dead, colleagues and friends interacting with the system recognise his personal style of thought and respond to the foibles and fancies of the thrilling intellectual companion whom they knew. To wipe out such a system irretrievably, rather than archiving it, was unanimously felt to be reprehensible. One participant likened it to the burning of the great library of Alexandria, attributed to Julius Caesar. Perhaps, though, the desecration would run even deeper than this image suggests.

Perpetuated fragments of responsive behaviour surely have a claim to sanctuary deeper in nature than this claims which can be advanced for books, photographs, tape-recordings and other passive relics.

It was over the phenomenon of computer induction that philosophical feeling was truly aroused. For those who find computing technology disturb-

ing, comfort is derived from a slogan that goes "You only get out what you put in!" and even more comfort from another which goes "A computer can never be creative!" As best I could, I deflected the stream of collective anxiety to the point where it properly belongs, namely to the nature of the computational structures created by computer induction. Are they to be black boxes... white boxes... grey boxes?

This is the issue to which social concern, and ultimately legislation, will need to be directed.

Donald Michie

Fax to Canada in just over a minute by satellite

THE first link in what could become a major international public facsimile service was launched last week between London and Toronto. Operated by the Postal Business side of the Post Office and the Canadian postal authority under the name Intelpost, the link is by satellite between selected post offices in the two cities.

Inaugurating the service Ron Dearing, chairman-designate of Postal Business, said the UK saw this as the first step in an international network; but the US Federal Communications Commission has rejected proposals for Intelpost put forward by the US Post Office and RCA Global Communications.

The original plan was for Intelpost to come into operation last year with links from the US to the UK, France, West Germany, Holland, Belgium and Argentina. Iran was also among the countries that had indicated an interest in the service.

However, the FCC rejected tariff proposals put up by RCA, and another major telecomms company, Western Union International, protested to the Commission that RCA pricing

for Intelpost undercut the already established RCA Q-fax service. This service operates between RCA bureaux in the US and PTT offices in about a dozen countries including Japan, Hong Kong, Australia and Switzerland.

The tariff suggested by RCA for Intelpost, which it said did not differ greatly technologically from Q-fax, was 60 cents a page with a minimum volume requirement. The Q-fax rate is between \$10 and \$12 a page. RCA has made no comment on the FCC objections.

Meanwhile the London-Toronto satellite link is costing £4 for the first sheet plus £2 for subsequent sheets of the same message. Each A4 sheet takes about a minute to transmit. If the message is collected by express post it costs a further £2 and another £1 for optional special delivery in Toronto.

To give the service a starting boost there is a half price offer for the first three months. Dear to door delivery takes from three to seven hours during the normal working day.

An urgent document is fed into a scanning machine at the Royal Mail's Intelpost Centre at the Stock Exchange Post Office in London. The facsimile will be in Canada in just over a minute.

High speed Z8000

A HIGH-SPEED version of its Z8000 16-bit microprocessor has been announced by Zilog, and it intends to extend the power of the chip further by adding linked specialised processors in the future.

The new version of the Z8000 runs at 6 MHz — 187 nanoseconds — and is offered in two packages, the Z8001A which has 48 pins and can address up to

eight megabytes of main memory, and the Z8002A in a 40-pin package addressing 64K-bytes.

The Z8000 features an architecture which enables additional specialised processors to be linked to it. Zilog is looking at a number of add-on products such as a fast Cobol processor and an array processor.

FOCUS

Motivation for DPMs

IN a period when improved DP productivity is high on every installation agenda, motivation of both personnel and management is becoming an ever more important factor. Motivation can take many forms ranging from direct encouragement to dire threats with a little general pleading and cajoling thrown in for good measure.

In the States, however, there is no room for such subtleties. The latest salary survey reveals that in the land of the Big Apple, the DPM is taking a substantial hit, the average DPM's salary in 1979 being \$27,000. The front runners in the US pay stakes are public utilities and financial institutions, which probably reflect similarity in the UK. Obviously, therefore, UK DPMs seeking their incomes would be well advised to move into government service or to emigrate. If such a prospect does not turn on the average UK DPM, alternatives are not far away.

According to Ted Cluff of the Institute of Data Processing Management, a definitive motivation list for DPMs would include: job satisfaction, bonuses, consultative management, working conditions, salary and progress.

Not all of us would agree with this selection and many would be inclined to offer a more working conditions provided the job itself had adequate compensations.

all DP man. For many it suggests the prospect of the early introduction of high-level computing technology — for others, early retirement.

Having received the motivational message, it is the turn of the DPM to encourage his team. Where cash is tight and hours are long, the introduction of a portable radio in the ops room, a covered motorcycle and in the car park or a poster of Bo Derek could well improve morale and, hopefully, productivity.

For the installation as a whole, winning fame and prestige could possibly work wonders. Winning the Computers Competition could be just the thing. The running event should appeal in particular to those DPMs who are spending much of his time charging about in all directions. This event is not recommended for system analysts who specialise in running round in ever smaller circles.

The throwing event is very much for the programming team who are capable of throwing the complete installation into total confusion. In their case, a contest featuring loops would be appropriate.

Only with Rapid Recall

Rules say Cluff will have to stand again!

BY a constitutional quirk, the Institute of Data Processing Management's full-time secretary general Ted Cluff will have to stand for election again at the Institute's 1980 annual meeting. It is being held at the Bloomsbury Centre Hotel, Corn Street, WC1 on Thursday, July 17 at 8.30 am and, in addition to Cluff's position, five members of the Institute's ruling council stand down. Nominations for all posts close on Tuesday, July 15 at 5 pm.

Cluff, who signed a seven-year contract with the Institute will

have to go through the ballot box next year as well because it is now too late to change the rules for the 1980 meeting.

The meeting will be asked to endorse increases in membership fees of from £8 to £15 for an associate and from £12.50 to £21 for a full member.

The membership total currently stands at 6,500 and it is expected to pass the 10,000 mark in early 1982. Currently, about one third of all the applications are either coming from or are being sponsored by GCS members.

IBM aims for more WP sales

From front page

over time support for facilities for filing and transmitting documents between all the world processing products included in the announcement.

It is forecast that by 1990 a substantial part of IBM's revenues will come from OEM peripherals sold to all corners (CW June 12), and the company has taken its first steps in this direction with the European

launch of its 3101 Teletype-compatible display and the associated 3102 thermal printer. The products are being sold in the UK through IBM's new direct marketing centre in Chiswick. The 3101 is an Ascl display with separate keyboard, attachable to IBM and other manufacturers' computers and running at speeds between 110 and 8,600 bps. The printer is a thermal matrix printer running at up to 40 cps.

Dispelling the myth of the 'backward North'

YOU can find anything you want in London, so they say. And indeed it does seem that, in order to look at most aspects of the computer world, you don't have to stir very far from the metropolis.

As many companies have their head offices in London, it is not only interesting but a refreshing change to find one which is based in the heart of North-West England with the London office only a suburb.

Ask anybody what they think of Liverpool and they will probably say that it is dirty, grimy and wet but the people are marvellous. Marvellous people are few and far between and the notion that most of them are collected in Liverpool is a bit hard to swallow. However, if you travel North there is a

striking difference in character and attitude, which does not, however, make business there any less fruitful.

KBS Computer Services is a 10-year-old private company which is just about to become a limited company. Its head office is in an impressive Victorian building in Liverpool's Dole Street. Bowers of Kennedy, Rovers and Smith, the original KBS, is now the sole proprietor of the company which is engaged in running commercial and TOIS courses, contract work and a data prep bureau. It is also an OEM dealer for the Texas Instruments DS9010.

The company first started running TOPS courses in 1975 when it was approached by the Manpower Services Commission and asked to use the training expertise it had cul-

lured in holding commercial courses, something Bowers had entered after finding an appalling lack of knowledge in the industry.

An IBM 4331 has recently been installed at the Liverpool office and the firm hopes to set up a bureau there. KBS has offices in London, Coventry, Leeds and Birmingham. The Coventry office has an ICL 2803 and also runs a recruitment agency.

The wide spectrum of activity covered by KBS does not impair its success in any one venture, but surprisingly the company does not make a very big profit.

"Bowers, the proprietor, is not the sort of man to focus all his attention on money-making," explained Andy Feather, advertising and promotion manager for KBS. "Most of the money was

make is ploughed back into facilities for the students."

The students at Liverpool that we spoke to confirmed the fact that they are very well treated and are getting the most out of their training.

Also, it was reassuring to see that on the day we visited KBS, a special open day was being held for representatives of the Manpower Services Commission and Job Centre workers.

We have written before on this page about complaints from prospective students and employers that Job Centres do not have adequate information to give to those who wish to pursue a career in computing.

On this particular day in Liverpool, people from the MSC were treated to a film show and introduction to computers, an explanation of KBS TOPS course,

TOPS students at work on the North Star Horizon microcomputer.

selection procedure and methods of training and were then given the aptitude tests themselves to attempt.

This part of the open day caused not only great hilarity as those present realised their unsuitability to the job of a programmer, but great insight into the sort of people who could find success in computing.

The attitude and application of KBS TOPS students was impressive. In recent examinations of TOPS courses we have always found an odd and interesting mixture of backgrounds, and Liverpool proved to be no exception.

A barman, a croupier, a used-car salesman, a teacher and an electrician were among the ones we interviewed, and even a former trainee priest has passed through the doors of KBS to programming success.

Both the ex-croupier and the ex-salesman said that they had to take considerable cuts in salary to go on the course, and that their starting salary on starting work would also be a great deal less than they were coming out with before. They also said that they had to put in quite a few hours, working most nights until nine or later, coming in at weekends and generally losing out on social life.

But there were no complaints. "You don't get many chances in life," said one student, ominously. "We're very lucky to get this one and if we mess it up we don't get another."

KBS TOPS students are carefully selected not only on the grounds of their success in the aptitude tests but on their general employability. As one MSC official pointed out, "There's a world of difference between training and placing."

One student had a job waiting for him on completion of his training, in Norfolk, where he was moving with his wife of only a few weeks. Students can state the areas in which they would prefer to live and work and the placement department, which arranges interviews and job nationwide, tries to adhere to their choice.

KBS teaches PL/I, Cobol and

Assembler on its programming courses, but as the courses are arranged so that people are trained in the correct ratio for vacancies, most do Cobol.

The students had all enjoyed the course and although not confident of complete success were sure that they would start their new jobs — two weeks before the end of course — and be useful from day one. One student said that he thought the training and depth of knowledge he had acquired was equivalent to 18 months' commercial experience.

No-one is going to suggest that all firms in the North-West operate in the same way as KBS in all their headquarters or with the same altruistic philosophy. Neither could they say the companies in this area are as successful, less business-like or in any way behind those in the South.

However, myths still do exist about the "backward North" and it is encouraging to find a firm of the size and diversity of KBS which is rapidly turning out highly qualified local people into the computer industry throughout the country.

Puzzler

As part of his homework recently, my youngest son had to "work out" 1872. The answer ran to eleven digits, and what with his trying to squeeze it all on to the same line of his exercise book, the first figure came out so small that I couldn't read it.

So his (correct) solution looked something like this:

95,382,992

However, I had very little difficulty in deciding what the final digit was supposed to be without the aid of a calculator. Would you like to hear my guess, before turning to page 5 for the solution?

SOFTWARE FILE

Green light for Ada production compiler

THE multi-million dollar contract for the first Ada compiler has gone to Softech of Massachusetts. The US Army communications research and development command, Caradcom, of New Jersey, has commissioned the company to build the first production compiler for the long-awaited high level language under the management of Dr Larry Weissman.

APL meeting

APL language originator Ken Iverson is to speak with Gens McDonnell on "Teaching and APL" at an open meeting at the Cafe Royal, Regent Street, London, on Tuesday, July 1. It opens at 8.30 for 6.00 pm and admission is free.

User group

A USER group for the MVT/Famos operating system has been formed by Equinox Computer Systems of London. MVT/Famos is a multi-tasking, multi-user disc operating system which runs on most 8080 and 280 microsystems.

Equinox has also announced that CAP's MicroCobol is now available on the Equinox microcomputer system, including the range of applications such as AutoClerk and AutoIndex.

Marketing deal

THE online programming system Acep, previously sold by Intel under the name Prepro, is to be marketed and supported by Software Modula Marketing of Sacramento, California.

Acep interfaces directly with CICS/VS, and also with remota BTAM, TCAM and VTAM as well as local 3270s. IBM's VSI and MVS operating systems are also supported.

Pacs goes online

PACTEL has announced an integrated online version of Paca, the inventory and control system, to run on ICL ME28/2803 series.

100 firms at first Euro show

WHAT is claimed to be the first European show to be devoted entirely to software is to be held in Paris next May. Run by a UK company, Executive Conference Organisers, it will be a three-day event in English and French and will include an exhibition. About 100 firms are expected to take part.

The plan is to provide each exhibitor with a terminal with access to remote machines in order to demonstrate products.

Details from Robert Joseph, Acorn Studios, 9A Byfield Gardens, Barnes, London, SW13 8HP. Tel: 01-748 0267.

Two challenge 2900 transaction market

TWO developments independent of ICL are likely to live up to the ICL 2900 transaction processing market. A newly-formed consultancy offering a complete transaction processing service for 2900s has arrived on the scene at the same time as Vecoms-TP2000, an online applications control system for 2900s running under VME/R, from Gresham Computer Services.

Consultancy Turney, Edge and Morfrew (Team) is said to have broad experience in the development of 2900 software. TP services and VME enhancement. Its services include TP design and implementation, project management and transition to 2900 TP under VME, and advice on sizing and performance as well as answering day-by-day problems.

Gresham's aim with the Vecoms-TP2000 was to build on the TP skeleton provided by ICL.

The system, which was developed using Cobol in 13 man-years, boasts an average response time of two seconds on nine terminals. It was developed with ICL's approval, and is already running at one site.

Vecoms-TP2000 costs £18,000, with £150 a year maintenance after the first year. A VME/K version is planned.

hoskyns 4341 services for the IBM user — batch and on-line —

HOSKYN'S GROUP LIMITED is a subsidiary of MARTIN MARETTA DATA SYSTEMS INC. operating worldwide with a network of offices and data centres in the UK.

16.8 million colour shades are impossible to show in a pretty coloured ad.

So here are 256 in black and white.

Available from Dicoll, AED's new full colour graphics system is more than just a terminal. It's a complete high resolution colour imaging system under microprocessor control with DMA interfaces available for most popular microcomputers.

Features:
Usually only available on much costlier systems.
High speed DMA port — new image in 1/2 sec.
Large refresh memory.
RS 232C interface as standard.
DMA interfaces to most microcomputers.
250 simultaneous colours selected from palette of 16.8 million shades.
Hardware zoom.
Vertical and horizontal vector and circle generation plus contour curve fill.
External drives for monitors and video tape equipment.

OP SPOT

IBM rules OK on the operator training scene

MANY an installation is willing to spend large sums on the latest in technology, but resorts to penny-pinching where operator training is concerned.

The latest in hardware and software is snapped up almost regardless of cost, much to the delight of management and development staff alike.

But the operators — the people responsible for the equipment, day in, day out — often receive very little in the way of formal training. They're expected to acquire their skills as they go along. Odd sense of values, don't you think?

For me it from me to discuss informal, hands-on training — it enables staff to learn the practical side of their work.

However, it is my view that such training is rather limited and must therefore be supplemented by formal courses.

It was for this reason that BOC Datasolve's operator training centre in Old Park Lane was featured on this page some weeks ago (Op Spot, April 17).

Let people think that Op Spot is biased in favour of BOC Datasolve, let's look at a few other companies and the operator training courses they provide.

"IBM Rules OK" as the company we contacted didn't provide anything for ICL or operators of other manufacturers' equipment.

Infotech Operatins runs a wide range of courses including

those relating to the IBM OS operating systems, DOS, DOS/VSE, DOS/VSE, data control techniques and telecommunications. The basic teleprocessing course is IBM-based and is intended primarily for sites which are about to implement a teleprocessing system.

The company also runs an advanced teleprocessing course intended for experienced operators and TP controllers. Both courses are IBM-based and are held in London on a three-day residential basis. The fee is £345, plus hotel expenses.

Peter Young, manager of forums and courses at Infotech, told me: "The advanced TP course examines data communications and its practical applications in real time and teleprocessing systems. It goes into fault diagnosis, reporting and recovery techniques."

Now, some managers contend that they can't let their operators go on courses because they don't have sufficient cover.

Well, if you're an operator at a site with IBM kit and you have come up against that sort of excuse, why not tell your manager about the video courses available from Deltak, a part of the Business Intelligence Services Group.

The beauty of the Deltak courses is that they can be followed on-site during the day, evening or night shift.

All your manager has to do is buy the video equipment (Deltak will give him expert advice on this) and rent or buy the appropriate courses.

Courses of interest include 370 architecture, the IBM OS operating systems, DOS and DOS/VSE. A DOS/VSE course will be available soon.

If it's operations supervision and management courses you're after, why not try Hoskyns Education, who are based at 91-93 Farringdon Road in London. Tel: 01-242 1851.

Hoskyns Education's week-long operations supervision course costs £245 per person. It covers such matters as decision-making, staff appraisal, staff training, and verbal and written communication.

Infotech's address is: Nicholson House, High Street, Maldenhead, Berks. Tel: 0628 35031. And Deltak's: Deltak Ltd, Benda House, Cambridge Grove, Hammersmith, London W6. Tel: 01-741 4711.

Op Spot is your forum

NOW that we're back in business it would be good to hear your comments on all sorts of matters relating to the world of computer operations. Op Spot is the only place in the computer trade Press where operators can put forward their views, ideas and complaints. It's a forum intended for you — why not make use of it?

"Best of manager we ever had!"

HOW TO TURN A PROBLEM INTO A CRISIS.

Ignore it. Hope it will go away. Tell yourself your Shift Leader isn't really looking for a new job. That your Data Prep Supervisor's holiday is still months away.

If you're very, very lucky, you'll get away with it. But if you're not prepared to trust to luck, the sensible thing to do is talk to Knight Computer Services.

We'll help you through a temporary crisis period by offering you the pick of our temporary staff, from data prep people to operators and programmers.

Or our consultants will help you find a permanent solution to what you thought was going to be a permanent staff problem.

Whatever your problem is, we'll bring our ten years of experience, and the strength of the BOC Group to crack it.

Before it cracks you. Phone us for a no-commitment discussion of how we can help you.

Knight Computer Services Ltd, 14 Old Park Lane, London W1Y 4NL. Tel: 01-491 4700.

by Bernard Allen

Can you take TOPS students?

HOW about taking a TOPS operations student for two weeks' practical training at your installation? Borehamwood College is looking to place such students from July 7.

This part of the TOPS operations course provides an excellent opportunity for installations looking to recruit operations staff at the junior level. The students hope to find sites

near their respective home towns. They hail from the following areas: Stevenage (2), St Albans, Norwich, Hove, Luton (2), Wood Green, Northants, Watford, Hitchin and Sandy in Beds.

For further information, contact Derek Pinnock who is TOPS operations lecturer at Borehamwood College. He is available on 01-853 8024.

Manual v automatic scheduling for the data centre manager

THE typical installation copes with a wide range of problems, catering for the needs of many types of user.

Thus we have the wide use of online and real time systems, as well as batch, with hardware being placed in the hands of users.

Consequently, decisions on which user gets priority are much more complex making some kind of scheduling system necessary, according to a portfolio from Auerbach.

Called Developing a Data Centre Scheduling System: Overview, it is one of the latest additions to Data Centre Operations Management* and discusses the merits of both manual and automatic scheduling systems.

The author explains how a scheduling system helps the manager deal with such matters as unhappy users, user misperception, and equipment under- and over-utilisation.

On users, he says: "The DCOM (data centre operations manager) may actually be apologising for a problem caused by the user. A good scheduling system enables the DCOM to compare planned events with actual events and improve job flow."

Regarding equipment under-utilisation, he comments: "Scheduling cannot completely overcome the effects of a poorly configured system or improve poor operator performance. However, an effective scheduling system can help the DCOM deal more effectively with these problems by enabling him to identify the real cause of the problem."

The author points out that proper scheduling can improve the utilisation of any critical resource and touches upon the following areas:

● Input control. Late input almost always affects the schedule. The input clerk should know not only when the input is to arrive, but also when it is due in data entry, the next function

PHILIPS

Simply years ahead

Announcing the Philips multi-function P7000. The one that gets it all together.

You probably need more than one computer function, but you don't need more than one computer system. Not any more!

Now, at a price comparable to systems performing ONE FUNCTION, the P7000 will run * data entry * local file management * transaction processing * batch processing * interactive central enquiry and update * batch communication * remote job entry plus * word processing. All this, with up to 24 work stations on a single P7000 system.

Business Systems

What can this mean to you?

Bottom-line savings because you need fewer stations; single-function stations no longer sit idle; users cease to struggle to cross-train on dissimilar equipment; less equipment means lower maintenance costs, less office space.

Optimum flexibility because computer resources keep up with changing demands — hour to hour, shift to shift, month to month, one minute word processing — the next, taking orders and printing out invoices.

Planned growth because additional terminals, memory extension modules and peripherals can be added step by step.

What's more, the P7000 is installed and

proven in over 30 UK sites. This is just one of a dynamic range of office machines — and all part of the wider Philips Business Systems' contribution to a whole new world of business knowledge.

I would like to know more about the P7000. Please contact me. I would also like information on the full range of Philips Business Systems' equipment.

The day computer operators look like this,

you won't need Dataskil's Operations Services

Computer operations staff are, as yet, only human. They can only work so fast. They go on holidays, fall ill or may be leave. Dataskil Staff Services can fill the gaps, advise on recruitment and provide practical guidance at all levels.

Dataskil's experienced staff bring you speedy relief and stay only as long as you need. If you're in the throes of adopting new equipment, their helping hands ensure a smooth transition.

Meanwhile, there's time to recruit and train your staff properly. And here you can draw on our experience in the job market to find the right people.

Staff Services will also help to increase your operations staff efficiency. If you opt for on-site practical guidance, they'll soon be up to the high standards set by Dataskil.

Staff Services are part of our Operations Services from Dataskil, which includes Management, Consultancy and Procedures. Dataskil is unrivalled in providing such a complete service and it's available to anyone with a computer.

PEOPLE and EVENTS

CAN you spot Scm Computers' sales director in this picture? The clue is the tiny letter R on the cuff, and the man is Neil Atkins, who is also a Reserve Officer in the Royal Naval Reserve. Atkins received the Royal Navy's Reserve Decoration from Rear-Admiral Williams, Flag Officer Medway. The Decoration is presented for long service and good conduct. Atkins has been a serving Reserve Officer for 14 years.

Selling Scotland in Silicon Valley

THE City of Glasgow is to be promoted in the US by a newly-appointed Business Development Executive, Edward Brodie. His brief is to sell Glasgow as a trade and investment centre in companies seeking to expand their operations or link up with Scottish companies.

Brodie will be based in California for one year, during which he will make contacts in the business community, promote Glasgow and the West of Scotland as a base for industrial expansion and identify outlets for Scottish products and know-how in the US.

Later, he may move on to other parts of the US, Japan or Europe. Brodie is also deputy chairman of Inflight Business Systems and managing director of the Black and Edgington Group's computer division.

Kevin Kelly has been appointed general manager of Pensons and Insurance Computer Services, the division of UCL in which he was a partner before its acquisition by UCL in 1978.

Kon Macs has become sales manager computer systems with ITT, and Peter Harbour is product sales manager, viewdata systems.

Roland DeSilva has been made director of International operations with Auerbach Publishers. Until recently he was a publisher with Chilton International.

Brian Arnott has joined Century Data Systems Inc in the newly created position of director of European marketing. He will be based in Bracknell, Berks.

OBITUARY

Sir Vincent de Ferranti

SIR Vincent de Ferranti has died at the age of 87. He became chairman and managing director of Ferranti Ltd in 1950 after the death of his father. The atmosphere which was created under his leadership was very favourable to research and led to the company's major contribution in the electronic field.

It was owing to his encouragement that Ferranti's pioneering work on the digital computer was undertaken, in collaboration with Manchester University.

Sir Vincent remained as managing director of Ferranti until 1964, and as chairman until his retirement in 1965.

Engineering prize deadline approaches

A £500 PRIZE is awarded annually for a practical contribution to the advancement of electrical or electronic science or engineering. It is the Karl Heinrich Gyr and Heinrich Landis Commemorative Prize, and is administered by the Council of the IEE on behalf of the donors, Landis and Gyr Ltd.

The prize went last year to Dr T. G.

Slaney for his work on the application of the Josephson Junction to research into high frequency microwave and laser systems.

The deadline for applications is next week, June 30. Forms and further information about the award can be had from the Secretary, The Institution of Electrical Engineers, Savoy Place, London WC2R 0EL.

NRDC chief

DR JAMES CAIN has been appointed managing director of the National Research Development Corp, succeeding W. Makinson, who retired at the end of May.

Dr Cain has a PhD in chemistry and worked as a research chemist before joining NRDC in 1965. He has been chief executive of NRDC's department of applied science since 1971, and a member of the corporation since 1973.

Plessey Semis MD appointed

PLESSEY Semiconductor has a new managing director, Douglas Dunn, who has joined Plessey from Motorola UK, where he was deputy general manager of the Enat Kilbridge operation.

Dunn will be based at Swindon, Wilts and will report to Mervyn Larkin, managing director of the solid state division.

Chairman of CEI

CHAIRMAN of the Council of Engineering Institutions for 1980/81 is Dr Percy Allaway, chairman of EMI Electronics and a past president of IEE.

Elected vice-chairman is Bryan Hildrew, managing director of Lloyd's Register and senior vice-president of the Institution of Mechanical Engineers.

Jim O'Hagan has been appointed director and general manager of Datacell, and David Shppard has been promoted to bureau manager, with the responsibility of marketing technical packages for the engineering and chemical industries.

James Stark has been appointed a director of V-Ard, the engineering consultancy. His previous appointment was that of manager responsible for control systems, simulation and microprocessor applications.

Manfred Orenzeiter, previously European distributor manager of Rockwell's electronic device division in Munich, has become sales manager for Central and Southern Europe with the division. Leonard Sim has joined the division, as sales manager, from Ferranti's Semiconductor.

MINI-MATE PC-BAT

ICL Logiclex has invested more than £500,000 in a new of its two computer-controlled plating lines at Plymouth Grove, Manchester, and Kild Grove, Staffs. Shown here is part of the section of the line at Plymouth Grove used to electroplate copper and tin-lead on to the circuit patterns on the outside surfaces of the multi-layer boards. It also plates the sides of the holes that vertically connect the different layers inside a board.

The electroplating is preceded by an electroless plating process which metallises the sides of the holes to a sufficient thickness for electroplating to become operable. The inside layers are made up of copper clad epoxy glass laminates which are bonded together after the circuit pattern has been etched out of each copper layer using a photo-chemical process based on a photographic master of the circuit artwork.

When up to eight different layers of active circuit lines as narrow as six thousandths of an inch are contained in one printed circuit board the holes that vertically connect the layers must be positioned with great accuracy. To achieve this level of precision ICL Logiclex uses a program-controlled automatic drilling machine from the US firm Excellon of Torrance, California, which was considered to offer the most suitable equipment for the job. The Excellon machine in our picture (right) is one of six at the Plymouth Grove factory which together are capable of drilling several million holes a day.

System X a target market for Logiclex

THE Post Office's massive investment in all-digital telephone exchanges for System X could provide a lot of business for the multi-layer printed circuit board manufacturing and marketing operation, ICL Logiclex, that was formally launched by ICL last week (CW, June 19).

Logiclex personnel have already had talks with the Post Office about the suitability of using its multi-layer boards in System X exchanges in the future. It appears that multi-layer

Indeed, Logiclex expects two-thirds of its projected £5 million worth of business outside ICL in 1982 still to come from the UK even though by 1984, according to figures quoted by Logiclex itself, the multi-layer board market in Europe alone will have grown to nearly £160 million.

Logiclex's plan is to expand production by 20% a year over the next five years, and no more than about 25% of output during that period will go to outside customers. This growth can be achieved with the existing plant and machinery at the two existing and virtually identical fine line multi-layer manufacturing facilities at Plymouth Grove, Manchester, and Kild Grove, Staffs. According to Logiclex there are about a dozen other factories around Europe manufacturing multi-layer boards at the moment. They belong to competitors like Marconi, Ferranti, Siemens and CIL-Honeywell Bull.

But Logiclex is confident that this service it can provide compares favourably with any competitor. The company points out that its highly productive equipment will reduce the time for getting a customer's custom designed board into production from nine months to three months and that the wait can be as little as six weeks using a special quick turnaround facility.

Logiclex claims to be the only PC board manufacturer that can produce boards with as many as 22 layers in large volumes while achieving economically high yield rates. The average proportion of boards that have to be totally scrapped in a week is only 24%. About 150 boards with 22 layers are being produced per week at the moment. Each 22 layer board contains eight layers of active circuitry and is used as a motherboard for a range of off-shelf and custom designed boards, each with a total of six or eight layers and nearly 150 integrated circuits.

Logiclex claims to be the only PC board manufacturer that can produce boards with as many as 22 layers in large volumes while achieving economically high yield rates. The average proportion of boards that have to be totally scrapped in a week is only 24%. About 150 boards with 22 layers are being produced per week at the moment. NASHUA QUALITY

technology satisfies the System X requirements for high reliability and fast reprogrammability. Logiclex points out that its output of multi-layer boards is a lot higher than any of the three telecommunications firms under contract to build System X exchanges: GEC, Plessey, STC.

Telecommunications is one of several markets being targeted by Logiclex. Avionics and military electronics in general are two other big potential outlets, and Logiclex emphasises that it is also prepared to sell boards to ICL's competitors in the computer business.

But while it claims world leadership in multi-layer fine line PC board technology, Logiclex does not appear to be geared up yet on the marketing side to make a killing outside Europe. In the US Logiclex depends on ICL's small force of computer salesmen to make initial contacts with prospects in the electronics industry, and there is no marketing set-up at all in Japan — a market with enormous potential. Logiclex recognises the potential of Japan but has made no arrangements yet to sell there.

Are you sure what's going on under the D.P. surface?

Sometimes you have a suspicion that things are not as they appear on the surface, but can't put your finger on the reason. With Computer Operations at the hub of your data processing activity, everything that occurs there can reflect significantly on your D.P. unit and even your Company. However, it can be difficult for you to take a detached view and be totally objective about the impression you create.

Dataskil can help. Or perhaps you are in the throes of changing from one mainframe to another. Technical expertise, resources and organisation can come under strain, and users suffer.

Dataskil can help. Or perhaps you are in the throes of changing from one mainframe to another. Technical expertise, resources and organisation can come under strain, and users suffer.

We can conduct a survey of your operations activity, tailored to your exact needs. We can advise and help on resource control, organisation and staffing levels, salaries and recruitment, define standards, develop procedures, implement projects. And we can provide operations staff at all levels.

Take a fresh look - through our eyes.

Phone or return this coupon with your letter heading to: South & West - Mike Windsor or Jeff Brooks, Dataskil Ltd, Reading Bridge House, Reading, Berkshire (Tel: Reading (0734) 351258). Midlands & North - Laurence Holaday, Dataskil Ltd, St. Ann's House, Alderley Rd., Walslow, Cheshire (Tel: Walslow (0625) 532831). Please arrange an initial discussion without commitment. Please send your brochure. Please arrange a free one day operations appraisal.

Disk packs from Control Dataset.

Because you can't choose better than the world's biggest brand.

The Control Dataset label on a disk pack reflects its maker's system/diversified technology capability. Control Dataset is the world's largest supplier of scientific and engineering computer systems. The leading supplier of OEM peripherals, particularly of disk drives. The biggest manufacturer of disk packs and cartridges. With large-scale UK manufacturing facilities, for full quality control and maximum availability.

For exclusive supplies of CDC and ICL label magnetic media, contact Control Dataset. You'll gain the services of Britain's most extensive and experienced sales and technical support forces.

You can't choose more wisely than the biggest names in disk packs and cartridges from the UK industry's largest supplier.

Call Control Dataset on 0162 3359, today, or write to Control Dataset, Limited, P.O. Box 16, Avenue, Weybridge, Surrey, TW20 2AB.

MICRO NEWS

Apple to use Eire as launch-pad

DURING Computer Weekly's enforced absence, US computer company Apple has made two decisive moves that could make its position in the personal computer market equal to that of Intel in the microelectronics market.

Firstly, it has moved its concentration with Apple II from the education market directly to the business market with the new Apple III.

Secondly, Apple is moving in a big way into Europe, with a plant in Cork, Eire, and a European marketing operation in Zeist, Holland.

Apple III is aimed directly at the £1-10,000 business computer market which, according to Dataquest, is growing much faster than the home computer market and is expected to reach \$700 million by the end of 1981.

The system can be used in two main configurations, an information analyst and a word processor. Both can be Apple II look-alikes and directly run Apple II software.

For about £2,500 the information analyst package comprises an Apple III incorporating 96K bytes of RAM, a built-in 5 1/4 inch floppy disc drive, which controls up to three additional discs, a 73 key numeric keypad, two built-in printer interfaces and a 12in black and white video monitor (a colour monitor, or TV set is optional).

The software includes Apple's SOS (optimised operating system) which supports Pascal, Basic, Fortran and Pilot (educational language) and tools such as Visicalc III, Mail List Manager and Apple Bus-

ness Basic.

As a word processor, Apple III comes with an external floppy disc drive as well as the built-in one to provide the capacity to store about 60 pages of text per floppy disc and costs about £4,000.

The Silentype thermal printer, or a letter quality daisy-wheel printer can be used. Software includes SOS and word processing applications software, and training is provided.

Like its predecessor, Apple III uses Mins Technology's 8502 processor, but in a later form. The 2MHz 8502A is twice as fast, has additional instructions and is capable of addressing 128K bytes of memory. A 9-bit D/A converter is also built-in for use in voice and music synthesis. Apple is currently doing R&D in speech synthesis.

Microsense boosts its dealer network

AS PART of a plan to expand the number of Apple dealers in the world, UK distributor Microsense will be boosting its number from 200 to about 300.

Set any new dealer must come up to a higher standard of support if they wish to gain Microsense's authority.

Users will be able to obtain the support service by paying an annual charge of £105 for an Apple II system. A similar scheme is envisaged for Apple III users.

For this fee, each dealer will supply a spare parts service for the user and return faulty parts to Microsense for repair.

Apple will be sending an Apple III to each dealer in July and volume deliveries are expected in August in the US and in October in Europe. It is likely that dealerships to office equipment suppliers will be granted and ITT, which produces Apple II under licence as the 2020, will not be given a licence for Apple III.

Mike Brawer, managing director of Microsense, is planning to move sister firm Data Efficiency into an 18,000 sq ft building. The old one at Hamel Hempstead will be used as an Apple III store and for workshops.

1,400 more jobs for Irish

APPLE hopes to make a big impact in Europe and take 30% to 40% of the market. Initial plans are to occupy a 43,000 sq ft manufacturing plant at Cork, and, at the same time, to set up a distribution and support facility in Zeist, Holland. The factory should be running by September, firstly to assemble Apple II's and then to manufacture both Apple systems and their respective peripherals.

This means 65 new jobs in Eire by winter, with about 1,400 by 1985, when the manufacturing area will have expanded to 380,000 sq ft.

US personal market shares

ACCORDING to a Dataquest survey, Apple has about 24% of the personal computer market in the US. Tandy has about 48% while the Commodore Pet has about 12%.

Although Tandy is top in terms of numbers, Apple claims to be top in terms of value of systems. However, in the UK, this is almost reversed: Commodore claims to be top with about 50% of the UK personal market.

Make your Pet sing
A COMBINED hardware/software package which is said to "make your Pet sing" is being offered by IJJ Design of Marlborough, Wilts. It is manufactured by Micro Technology Unlimited in the US.

Full size screen version of Pet is launched

THE full-sized screen version of the Pet (CW, January 3) was launched at the Hannover Fair in April. It has 18K bytes of firmware and 32K bytes of user RAM, and is designed for both word and data processing.

Two floppy disc drives are available with the system, called CBM 8001. The first is a double-density, single-sided disc with a

Brum helps with IC and device problems

THE electrical and electronic engineering department of Birmingham University is to set up a service for industrial, commercial and government organisations to look at thermal problems in integrated circuits and specialist discrete devices such as microwave and V MOS devices.

With a Wolfson Foundation award of £110,000, the department is planning to buy a set of thermal imaging equipment to attain resolutions of 10 to 15 microns in its temperature and other measurements. Up to now it has been using equipment which can provide resolutions of 30 to 50 microns.

Two members of the research group concerned with this are Dr P. W. Webb and Prof. G. T. Wright, who are major problems emerging soon in microelectronics fabrication. They define it as the placing of driving devices, such as power circuits which get hot, in close proximity to, but not necessarily on the same chip as, MSI, LSI and VLSI devices.

As the trend for more dense circuitry continues, so does the need for tight packing of devices with different thermal properties. This in turn creates reliability and temperature resistance problems.

A company that has designed and fabricated a circuit can use the facility to investigate its thermal profile and to detect certain characteristics, such as maximum temperature, over a period in different conditions. A reliability figure can be obtained with the results.

The department has offered a similar service for some time, primarily to investigate the market and the need for the service. Most of the work was done with discrete devices, but now recognises companies that may be interested in the service for GEC, Smiths Industries, Test Instruments and others.

Maintenance service for a rapidly expanding market

INTEGRATED circuit technology is changing so fast that it is almost impossible to define it at any one point in time. In turn, the application areas of LSI and VLSI devices are striving to keep up with the phenomenal pace.

One such area, the microcomputer business, which is totally dependent on the microprocessor, has succeeded in growing at a similar rate in the change in technology. Now the stage has been reached where it is no longer feasible to class the microcomputer as one segment of the computer industry.

It has expanded so much that it can quite easily be split four ways within itself. The story is not complete, however, as gaps have been left in the market.

Various support businesses have been followed up at the same pace, and consequently the market is grossly under-served. Jim Myson, formerly of Digital Equipment's field service marketing department, has recognised this, and set about trying to correct the situation. With the backing of Mid-

MYSON... the consequences of failure to a small user of business or financial loss could be greater than that for a mainframe user.

tron, the Derbyshire-based terminal and DEC-based microsystem supplier, he has formed a subsidiary called Terminal Systems which is aiming to provide a hardware maintenance service for various types of microcomputers (CW, June 12).

Myson considers it necessary to split the microcomputer segment of the industry into four separate categories, the boundaries of which will continually change to incorporate changes in technology.

These categories comprise a top end, a mid-range, a bottom end and a components sector, which all reflect their own characteristic tendencies in the marketplace.

Starting with manufacturers

Software support for Sinclair

SOFTWARE to support Sinclair's ZX2 personal computer will be available from ACT Research in August. At the same time the ZX2 system upgrade will be released. ACT also plans to support the

five best selling portable personal computers out of those recently launched, which include Newbury Laboratories' New Train, the Apple II and the new Atari systems.

Discount for Polytechnic

KINGSTON Polytechnic has obtained a discount maintenance service from Terminal Systems in Belper to support its Pet and Apple personal computers. Television terminals and micro equipment, each Pet and Apple unit will

be repaired for a basic annual charge of £40 plus VAT, while the television charge will be dropped from £25 per unit to £20 per unit. The Tricall service means that when three units go down they will be collected and repaired by TSS.

maintenance service is required and where.

At the component level of the market, service needs for hardware and software can only be supported by the manufacturing or supplying company. For example, if a program error is detected when running a program from ROM, the user has but one option — to return the ROM chip.

Myson stresses that the picture is very different with regard to the high volume business of personal computers at the bottom end of the market, which is certainly inadequately supported. He has developed a three-tier service to satisfy low, medium and high customer expectations.

High customer expectation calls for a speedy on-site service,

where the engineer can arrive at the scene, detect and correct a fault within a few hours. This type of service is charged at a percentage of the system value per annum, which can be anywhere between 5% and 30%. However, this is not really a cost-effective solution for personal computer users and Myson advises that a spare system would make more economic sense.

For a medium level of customer expectation a one and two day response is required. Lower still, the systems can be taken to a maintenance depot for repair and then returned. Myson will be concentrating on this type of service for personal computer users.

Mid-range systems, being a low volume business, are usually serviced by dedicated support

Many applications areas are being created by the growth in technology, but not all their support markets have been pursued. This is particularly the case in the personal computer business where the market for maintenance is grossly under-served.

Micro News Editor Eileen Stalner talked to former DEC field service manager Jim Myson who has recently been made managing director of Terminal Systems Services, set up to provide hardware maintenance for various types of microcomputers.

Myson explains his philosophy, how he hopes to run TSS, and the support he will be getting from its parent, Mideltron, which is based at Belper, Derbyshire.

organisations and, according to Myson, require no further support.

At the top end of the market, an area already well supported, exists high volume business, which calls for the three tier service. Terminal Systems Services is offering a four hour or less service response time for high volume quantities, including Mideltron's distribution of DEC-based systems, and range of terminals for this area.

Sn Myson opted for TSS to support the top and bottom ends of the market with the three tier system. For £25 plus parts and VAT the user can obtain the "return to workshop" facility offered by TSS for each unit that

goes wrong. Myson is planning to set up a network of service bases throughout the UK to control this.

For 15% of the system value at the high end the user can obtain the on-site service, which will be backed up by an already established Mideltron transport system that covers the UK.

Myson's policy originates from the fact that to a small system user the consequence of hardware failure in terms of business or financial loss could be greater than that of a mainframe failure to a large industry. It necessitates the microcomputer purchaser realising service needs before choosing a product type.

THE ITT 3451 INTELLIGENT DATA ENTRY TERMINAL

Eight facts about the ITT 3450 range, one of them exclusive, all of them impressive.

The ITT 3450 range includes the only intelligent data entry terminal offering Business BASIC. (The language that laymen can learn in a matter of hours.)

And that's just the icing on the cake. All the terminals in the range are 3740-compatible, but available at considerably reduced rental rates.

(Indeed, for those who don't need Business BASIC, there's an economic dual-keyboard unit that's almost as cheap to rent as a couple of electric typewriters.)

They all give you the rare bonus of immediate delivery.

Their LSI technology brings both greater reliability and a more compact design.

They have the capacity to communicate under BSC protocol up to the recommended maximum of 9600 b.p.s.

And they connect with a high quality bidirectional printer that pumps out 180 characters per second.

Like all ITT Business Systems' products the 3450 is backed by a full nationwide sales and service organisation.

Post the coupon today for more information. We think you'll be more than impressed.

Ring 0273 507111 or send to: Publicity Department, ITT Business Systems, Lion Buildings, Crowhurst Road, Hollingbury, Brighton BN1 8AN (Telex: 87169).

FUTURE SYSTEMS FORUM

Royal Lancaster Hotel, London
10-11 July 1980

An international conference to analyse and forecast trends in information systems in the 1980s.

Online have arranged, in association with Advanced Computer Techniques Corporation, to present in London 'Future Systems Forum' which is a European up date of a highly successful conference recently held in Phoenix Arizona.

It is an appraisal of likely future developments in large scale computing, communications and office automation. This will deal with forecasts of the probable characteristics and price structure of the IBM new range, including Series 'H'.

The conference brings together experts in both technology and financial analysis. It presents a unique opportunity to delegates for the exchange of information and views with some of the foremost authorities in this field.

Future Systems Forum in Phoenix received exceptional coverage in the computer press as the selection of quotations below indicate:

"IBM will eventually evolve into a gigantic service bureau" (Charles Loebl in the keynote address at Future Systems Forum) Computerworld
"At Future Systems Forum in Scottsdale, Fertig unveiled the most detailed projections yet" Electronics
"Well, contended the way to do it is to raise prices especially basic and let's not believe they'll do it again and again" Electronics News
"A major IBM competitor noted that 'Bob Fertig is either very right or very wrong, and he is more often right'" Electronics

Research lab set up by Westinghouse

WESTINGHOUSE Electric is establishing what will be the biggest and, it says, the best equipped robotics laboratory in the US. The company, which had sales over \$7 billion in 1979, has been using industrial robots in its factories for about three years. It plans to install several hundred new robots on its assembly lines by the end of 1981.

According to Tony Massaro, the lab's new division manager, Westinghouse will use the lab for three different applications: testing robots against their manufacturers' own specifications; testing the robots' usefulness; and debugging them; and devising new applications.

The lab is now being set up at the company's research and development centre in a suburb of Pittsburgh, Pennsylvania. Sixty percent of the equipment has already been installed, and Westinghouse officials say the lab should be ready in roll by the end of this year. The cost of building the lab, as well as

funding research there, is expected to come to several million dollars.

But how much will the use of robots in Westinghouse's laboratories save?

"You can't generalise about savings," answers Massaro. "In some cases, there are no dollar savings. But you have a more consistent product. And you can eliminate potential worker health hazards."

He explains that many companies have a difficult time complying with State and federal worker safety regulations. Most dangerous jobs are heavily regulated, protecting the health of the worker. But robots, Massaro says, need no such protection. "When no such protection," he explains, "it's a big deal."

Like most companies that use industrial robots, Westinghouse does not make robots. Instead, it buys them from the dozen or so firms that do, a group that includes Unimation, ASEA and DeVilbiss.

£1 billion sales by 1990 forecast for US robots

COMPARED with their counterparts in several other industrial countries, US companies at present use few robots. Japanese manufacturers, for example, use some 35,000 robots, ten times more than do their US counterparts.

Nonetheless, the US market for industrial robots is growing at a good clip. Last year, about 15 robot manufacturers and distributors sold some \$80 million worth of their machines in the US — a 100% increase over the 1978 sales, which totalled less than \$30 million.

This growth rate is likely to continue, and some industry experts predict annual robot sales in the US exceeding \$1 billion by the end of the 1980s.

The largest single group of robot users in the US is the automotive industry. General Motors, a pioneer in the field of industrial robots, has about 225 of the machines; Ford has some 250 mechanical arms, and Chrysler uses about 200 robots.

However, automotive firms' productivity rates, which robots supposedly improve, have not been good. Experts say it is too early to judge the machines.

"Robotics is a small industry," says Jim Albus of the National Bureau of Standards, "and the trends have yet to be studied. As of now, productivity data is scattered." NBS has been active in robotics, working to develop industry standards as well as conducting research in the field for other government agencies.

Additionally, neither robot manufacturers nor distributors are anxious to describe their business in detail. "Everyone in the business is afraid to talk," says Cincinnati Milacron, a robot manufacturing company. "We've got a good thing going and we don't want to encourage others to get in on it."

The effect of robots on employment levels is also unknown. Many robot suppliers say that their machines actually increase employment. Others

take a different approach to the problem — worker safety.

"A robot doesn't take a man out of a job," explains a spokesman from DeVilbiss, distributors of spray-painting robots. "It takes him away from a boring or dangerous environment."

No complete surveys document the robotics marketplace but most industry observers agree that the field is dominated by one name — Unimation.

Unimation was founded in 1958 by Joseph Engelberger, a physicist. His numerous contributions to robotics are commemorated by the Robot Institute of America, RIA, the industry's trade association, which has named its highest accolade, the Joseph F. Engelberger Award, after him.

Today Unimation, headquartered in Danbury, Connecticut, manufactures 10 different industrial robots ranging in price from under \$25,000 to over \$100,000.

Unimation claims to control about 75% of the US robotics market, but many experts quote numbers closer to about 40% or 50%.

Along with most of the US robotics companies, Unimation has close ties with the automotive manufacturers. One of its robots, the Programmable Universal Machine for Assembly, Puma, was developed in collaboration with General Motors. Puma will be used by the automotive plant to assemble small, lightweight components — over 90% of the parts in a GM car weigh less than five pounds.

Newspaper launch delayed

AN uninterrupted power supply which interrupted has been blamed for the delay in getting out New York's newest newspaper, the Wall Street Final. Intended to be on the streets with the day's closing prices by the time the breaking fraternity heads for home, the paper did not hit the streets until 7.45 pm when it launched last week.

According to publisher Michael Goldstein, the problem was caused by a malfunction in the power conditioner for the computers. He is quoted by the Wall Street Journal as saying the malfunction "caused the computers to crash" and the damage could not be fixed in time to meet the launch day deadline.

Call for papers

PAPERS are invited for presentation at PTO '81, the Pacific Telecommunications Conference, which is to be held on January 12-14, 1981, at the Ilika Hotel, Honolulu, Hawaii. The objective of the conference is to provide a forum for the discussion of technical, economic, regulatory and social aspects of communications throughout the Pacific. Three hundred papers should be submitted no later than July 18, and should not exceed twenty pages. The conference is organised by the Pacific Telecommunications Council. For further information, contact: Richard Barber, 2424 Milla Way, Room 704, Honolulu, HI 96822. Tel: (808) 841-3789.

Neither the individual companies nor the associations publish accurate market figures. For this reason, a number of robot vendors can claim the No. 2 spot behind Unimation. Cincinnati Milacron says that its 1980 dollar volume will exceed that of Unimation. "The exact figures are a secret," explains the company, "but we're going to give Unimation a run for its money."

Cincinnati Milacron markets two robots, its standard model T² and its heavy-duty model HT². Prices start at \$85,000 for both models, and go up to special software and tool fittings are added.

Although the company has made robots only since 1977, demand for its computer-controlled machines has grown to the extent that the company built a new factory for robot manufacturing last year in Greenville, South Carolina. "We're just at the start of an explosion," says a spokesman. "We've had orders coming in for tens and even hundreds of robots."

Besides building robots, the 98-year-old Milacron also manufactures machine tools, plastic equipment and semiconductor materials. The company, which employs about 13,000 workers in six countries, reported 1979 sales of nearly \$750 million.

Another company making claims to the No. 2 position is Prab Conveyors, of Kalamazoo, Michigan. The company says it now has some 900 robots in the field, although it is not disclosing any actual sales figures. In order to enlarge its robotics offering, Prab recently bought AMF's Versitron Automation Systems division, which has been making robots since 1962. The acquisition also gave Prab Kalamazoo company AMF's established worldwide market coverage.

The basic Prab robot sells for about \$24,000. The Versitron robot starts at \$40,000 and ranges up to about \$110,000. Prab, which has been manufacturing robots since 1968, also makes bulk conveyors for the pharmaceutical and metal industries.

The DeVilbiss company, which markets a Nexta 1000 made robot, dominates a field where there is little competition: spray painting. Trafil, the manufacturer, says that its machines account for 95% of the robotics market.

The DeVilbiss/Trafil robot is priced between \$70,000 and \$100,000. The high end of the price range includes options such as computer control, noise filters, alternate arms, water cooling, and counterbalance, which allow the robot to be installed upside-down from a ceiling.

Trafil, which also manufactures transport equipment, entered robotics in 1964. In 1974, DeVilbiss and Trafil signed a marketing agreement, giving the Toledo, Ohio vendor a foothold in the small market.

Since then, DeVilbiss has sold about 100 Trafil robots in the US.

On takeover trail
FURTHER consolidating its position in the graphics market, following its takeover of the plotting side of Calcomp, Calcomp Associates is planning to acquire digital systems manufacturer, Talos Systems of Scotland. The move is a share exchange deal valuing Talos at about \$10 million. Talos had profits of \$700,000 on turnover of \$1.3 million last year.

Israeli-Arab joint effort

HIGH on a hilltop above Haifa in the little Druza village of Daliyat-el-Carmel is one of the world's most unlikely sites for a VDU and microcomputer manufacturing plant. Yet that is where Elbit, Israel's only computer manufacturer, has chosen to build its DS 2000 and DS 1920 displays, and a forthcoming microcomputer built around three Z80A chips.

The setting and the plant are unlikely for several reasons.

Although Elbit owns the manufacturing equipment, the factory is owned by the Druze Arab plant manager — who also happens to own nearby land on which test drillings for oil have proved encouraging. And since there are believed to be only about 200,000 Druzes all told, the majority of them in Lebanon and Syria, it is a little surprising that the main employment for one of their settlements should be something so esoteric as

making VDUs.

The Druze Arabs are a sect formed about 1,000 years ago, and despite their small numbers, have miraculously survived into the twentieth century.

A confluence of interests brought Elbit and the Druzes together. Appropriately for a company 37% owned by Control Data, Elbit established the plant in a community where opportunities for work were very limited. It returned Elbit to a co-operative workforce, willing to accept comparatively low rates of pay.

It is easy to be cynical about such ventures and dismiss them as exploitation of cheap labour, but without Elbit it is unlikely that there would be any work in Daliyat-el-Carmel — and the fact that other companies have not followed Elbit up the steep mountain roads to the village suggests that it took imagination and a substantial personal effort to win the interest and the co-operation of the independently-minded Druze community.

China's first

CHINA has bought its first used computer of any substance, an IBM 370/138, from OPM Leasing of New York.

Siemens adds four models to 7.500

UNDERLINING that it really means business these days, the revitalised Siemens Data has added four more models to its 7.500 line of small and medium-scale miniframes. Pre-announced Siemens' answer to the IBM E-series, the line now covers a much broader spectrum than IBM's 4300 range.

Most striking feature of the new machines is that they will be built in emitter-coupled logic (ECL) circuitry designed and manufactured by Siemens, and will be backed by Siemens' own 04K-bit memory chips.

ECL is a high-speed technology unit recently used only in large computers because its high power consumption caused cooling problems which were difficult and expensive to solve. ICL in collaboration with Motorola was one of the pioneers in its use, and the 2900s from the 2070 up use ECL.

Amdehl's 470s also use ECL, and it is the technology expected to be used by IBM in the H-series.

In the past couple of years it has been introduced in lower level products, notably the Univac 1100/60 and the SEMS Mitra 525 mini, both of which use the Motorola 18800 ECL bit-slice micro.

Smallest of the four new models is the 7.530, which is a direct counterpart to IBM's 4331

Model Group 2 (CW, June 12). The 7.536 has an 8K-byte cache and two or three megabytes of main memory. The 7.551 has a 16K cache and up to eight megabytes of main memory, while the 7.361 is a dual-processor version also with up to eight megabytes, offering double the power of the 7.351, and a 32K cache.

The 7.571 is also a dual-processor machine, four or eight

megabytes of main memory and a 64K-byte cache.

All four are set for first shipments in the first quarter of next year, and the machines are announced in Siemens' Continental markets.

All the 7.500 machines — there are additionally a 7.521, 7.531 and 7.541 — run under the BS2000 operating system, which is akin to IBM's OS operating systems.

Prices online from US

UP-TO-DATE specifications and prices for computer products listed in the Auerbach reports will soon be available over Tymnet and Telenet from Bibliographic Retrieval Services of Secaucus, New York.

A sample database is already up on the BRS system, two 370/150s with accelerated memory, and the full service is due to be available in the autumn.

BRS has its own retrieval software, which is based on

IBM's Stars with modifications and enhancements, and the software is to be offered as a product by the company from July 1.

The Auerbach service will be updated daily and will be accessible by any subscriber with a Tymnet or Telenet-compatible terminal. Auerbach has not yet decided whether it will be offering a specific terminal to customers.

An alternative to the industry standard LA36

Data Dynamics
Computer and Communications Terminal **303**

NOW AVAILABLE ON 4 TO 6 WEEKS DELIVERY

The Data Dynamics is a plug compatible alternative to the industry standard LA36. It features many improvements including a rugged metal case, illuminated platen, paper storage facilities and takes up less floor area. It is available with or without a paper tape punch and reader.

60% of tellers will have terminals by 1990—PA

BY 1990 European bank staff directly serving the public will be aided by teller terminals at 60% of counter positions. This is one of the main predictions in a \$1 million study* into bank automation over the next decade now available from Pectel, the computers and telecommunications division of management consultants PA International.

The study also predicts a big increase in the number of cash dispensers and automatic tellers from 6,300 today to 60,000 by 1990. But the overall impression is that there will be no revolutionary changes in

European bank automation over the next 10 years.

Pectel interviewed 270 banks in 13 countries throughout Western Europe and found that most expected their computer operations to be based on centralised systems in 1990.

Lack of enthusiasm for distributed processing stemmed from the size of investment in centralised systems, the unproven economic advantages of distributed processing, the centralised nature of the management and security.

There is also a very cautious attitude to electronic funds transfer systems and Pectel

concludes that only some small local EFTS networks would be set up during the 1980s.

One network already in operation is at Bourg en Bresse in France where more than 50 merchants have IBM 3608 terminals linked online to an IBM 370/138 at the Banque Regionale de L'Alsace so that customers' accounts can be directly debited (CW, March 15, 1979).

In the UK, Barclays Bank is involved in a pilot project called Counterpoint with six petrol stations in the Norwich area where a customer's current account or Barclays card account can now be directly debited.

Truncation, the method by which banks avoid the expensive and labour intensive process of physically exchanging and sorting cheques, will also make slow progress in the 1980s, according to Pectel. Developments in this area include experiments with cheque image capture, transmission and sorting being carried out by NCR in co-operation with the Bank of America in California (CW, November 8, 1978) and by Burroughs in conjunction with the Midland Bank in the UK (CW, March 1, 1979).

The study embraces building societies and international banks with operations in Europe, but merchant banks are not included. Looking at the US banking industry the study predicts that banks here will be spending \$400 million a year on automation by 1990 and that the value of all kit installed by them will be \$2,100 million.

ICL is hoping to capture a share of this business through its marketing agreement with bank terminal manufacturer Fortronic, which has been extended to cover product development (CW, March 13).

The study, originally commissioned by several suppliers of bank automation equipment, is now available in several versions and sub-set costing from \$2,000 upwards to \$15,000 for a complete study.

Systems builders order Primes

FIVE Prime 150 computer systems have been ordered by Alternative Business Systems, a UK firm of systems builders that specialises in turnkey systems for real time commercial applications such as sales order processing. Employees run the company from their own homes with the help of a network of freelance programmers.

Several other manufacturers are said to be interested in making compatible systems and components, and the partners are keen to have the specifications adopted by official standards bodies.

The network design is based on Xerox's Ethernet, which was published last December after five years of experimental

work. Transceivers can also act as gateway to other types of network or to telecommunications links. Packets have a 4-bit address field and a variable length data field.

Intel is providing expertise in partitioning the communications functions into microcomputer systems and VLSI devices while Digital is providing expertise in transceiver design and computer network operation.

Intelligence is also being provided by the companies' own software, which is being developed in-house or by other manufacturers, to provide for the compatible interconnection of a wide range of information handling products at low cost, and aim to give a good boost to their method of achieving it.

Rival standards for local networking

LOW-COST local networking using multiple Z80A-based processors has been announced by Zilog. Called Z-Net, the principle of the facility is to use low-cost hardware in order to give each user local computing power while sharing high-cost peripherals such as printers and large discs between several users.

The single data channel which connects the Z-Net elements is a low-cost coaxial cable running at 800,000 bits per second. Stetone can be added or taken out of the network with no disruption provided a T-tap is already available in the cable.

Key to the system is the multitasking operating system kernel which runs in each processor on the system up to a maximum of 256. There is a network software overlay for all nodes which need to communicate, and the packet protocol itself consists of five

layers: the applications layer, operating system layer, network control layer, data link layer and physical link layer.

Two kinds of station are presently supported, both driven by the Z80A. The MC2-2 is an existing business microcomputer, and can be configured as a multilane controller offering IBM 2300/370 support for communication with the outside world. The new SDS 2/01 shared data station consists of a 10 megabyte cartridge drive with dedicated processor.

Languages offered are Cobol, Basic and PL/Z and because of the well-defined interfaces between the operating system layers, users can write their own operating software to enhance the basic kernel.

The Z-Net system will be sold primarily to OEM systems houses and to large users with in-house programming capability. Deliveries are within 60 days of order.

DEC, Intel, Xerox joint specs developments

SPECIFICATIONS for a local area communications network are to be developed jointly by Intel, Xerox and Digital Equipment, and published this summer.

The companies feel it is in their interests, as well as in the interests of users and other manufacturers, to provide for the compatible interconnection of a wide range of information handling products at low cost, and aim to give a good boost to their method of achieving it.

Several other manufacturers are said to be interested in making compatible systems and components, and the partners are keen to have the specifications adopted by official standards bodies.

Several other manufacturers are said to be interested in making compatible systems and components, and the partners are keen to have the specifications adopted by official standards bodies.

The network design is based on Xerox's Ethernet, which was published last December after five years of experimental

work. Transceivers can also act as gateway to other types of network or to telecommunications links. Packets have a 4-bit address field and a variable length data field.

Intel is providing expertise in partitioning the communications functions into microcomputer systems and VLSI devices while Digital is providing expertise in transceiver design and computer network operation.

Intelligence is also being provided by the companies' own software, which is being developed in-house or by other manufacturers, to provide for the compatible interconnection of a wide range of information handling products at low cost, and aim to give a good boost to their method of achieving it.

Several other manufacturers are said to be interested in making compatible systems and components, and the partners are keen to have the specifications adopted by official standards bodies.

COMPANY NEWS

INVESTORS and analysts have long gauged a company's attractiveness as an investment by dividing the price of a single share by the earnings per share to produce a "price-earnings" or PE ratio, and as an indication of a company's value, the price-to-earnings ratio or "P/E ratio".

A few price-earnings ratios can mean, for

instance, that future profits look uncertain and that a lower dividend may be paid. A high price-earnings ratio implies expectation of rapid profit growth.

US analyst Ronald Burger of Doan Witter Raymeyer has found another gauge of a company's worth: the price-to-research ratio. This is arrived at by dividing the amount a company spends on research

by the number of shares outstanding, and then dividing this into the share price.

A company with a low price-to-research ratio is regarded as attractive to Burger, and in the computer field, Control Data and

National Semiconductor, selling at between five and six times R&D expenditure, each particularly interested in him.

Applying the same yardstick to ICL suggests that those who say it is still significantly undervalued by investors are right.

Unlike US companies, ICL does not reveal its R&D expenditure, but it is at least

6% of turnover. Assuming that the company will report turnover of about £740 million this year, that means at least £45 million for R&D. That works out at 6.4 pence per share, and at last Thursday's closing price of 146 pence, ICL is selling at only 3.3 times research expenditure.

By Burger's yardstick, ICL shares are a snip at their current price.

Racal gets back into its old groove

THE deal Decca did with Polygram in connection with the transfer of its records business will cost Racal more than expected but otherwise, the outlook for Racal in 1980-81 is fairly rosy.

Hit principally by the tardy

placement of large overseas orders for tactical radio, reported at the half-year stage, Racal's pre-tax profits were up only 3.25% at £63,824,000 on turnover up 18.3% at £203.7 million.

With Decca consolidated, Racal is looking for its legendary historical growth to resume in the current financial year, with the target £600 million.

Decca is expected to contribute £150 million to this figure and to break even. Losses from Decca, originally put at £8 million and subsequently revised to £10 million, will be even more, although Racal cannot say yet by how much. All the losses are attributed to Decca's consumer businesses and the Decca TV company is up for sale.

Most dramatic turnover surge came in the data communications field with the small Recivide of Los Angeles leading the way. Sales were running at \$12 million before Racal acquired the company; they rose to \$20 million the following year and are now up to an annual \$32 million.

Racal-Milgo is also doing well, particularly in network management systems for large customers and as a result the data communications group stormed ahead more than 40%.

As a result, data communications has overtaken radio communications as the biggest single group in Racal, for the first time. Radio fell from 44% to 38% of the total business, while data rose from 32% to 39%.

In the future, Racal looks forward to the four newly-formed Racal-Decca companies competing as a group with radio communications and data com-

munications to be the biggest money spinner.

The four new Racal-Decca companies are defence radar, navigation, marine radar and survey.

Plug into Mexico

REFLECTING the attractiveness of Mexico as an investment base now that the country has been found to be floating on a giant oil field, Northern Telecom of Canada has formed a joint venture with Alfa Industries of Monterrey to manufacture Northern Telecom's SL-1 and SM-1 digital telephone switching systems.

Hit principally by the tardy

placement of large overseas orders for tactical radio, reported at the half-year stage, Racal's pre-tax profits were up only 3.25% at £63,824,000 on turnover up 18.3% at £203.7 million.

'Substantial' losses for Logabax

LEADING French OEM peripherals and small systems manufacturer Logabax has confirmed that it made substantial losses in 1979 (CW, January 17), but says it is not yet able to quantify them because of changed accounting rules.

Turnover, however, is steady: the company grew 27.4% to FF 470 million, about £82 million, with exports accounting for FF 127 million, up 24%.

The company has implemented stringent plans for the current year to get its business back into profitability.

Computer firms top US business league

TWENTY-FIVE of the top 100 small companies in the US are in the computer and computer equipment business. The ranking, arranged according to percentage increases in sales and revenues for 1975 and 1979 financial years, has Tandem Computers and Cray Research at its head.

The list was compiled by Inc Magazine, a journal which focuses on "the big business of smaller companies". To qualify, companies had to be independent, publicly held, at least four years old and having a turnover of less than \$25 million in 1975.

Tandem of Cupertino, California, maker of multiple

processor systems, is No 1 on the list with a compound annual sales growth rate of 358%. No 2 is large-scale system manufacturer Cray Research with a compound annual growth rate of 338%.

Other computer companies in the list include Cudo Systems, Floating Point Systems, DPF, Printronics, Prime Computer and Paradigm.

In addition, some of the companies were among Inc's top 20 performers ranked according to productivity and profitability. Data Terminal Systems ranked No 2 in profitability with its net profit at 20.2% of its sales. Cray Research, with its net profit at 18.3% of its sales, was No 3.

He's no genius, but we bet he controls his stock better than you control yours.

Do you, for instance, know the turnover rate or the turnover period of every article in stock?

He does. How much capital is tied up on any specific article?

He does. Do you know what proportion of turnover is represented by any particular product or product group?

He does. He has these answers and hundreds more within seconds of asking. As a result his company is saving thousands of pounds in interest on the capital he no longer tied up in stock. He uses the COMET Stock control package from Nixdorf.

Who is he? He's just one of the people using

Nixdorf computer systems in 70,000 situations throughout the world. He's just one of the Nixdorf customers benefiting from the 27 years of experience Nixdorf have invested in developing

computer systems for companies of all sizes. At Nixdorf's disposal, right alongside where he (or she) works, if you would like further information on the COMET Stock Control Package or if you would like to know what other systems are available, telephone 01-572 3111 or fill in the coupon below and send to:

At Perlec it's not just a range of disk drives

It's the range.

The range built on years of experience in the computer industry. And every drive within it offers fast access, simplicity and a level of reliability that has long been the envy of our competitors.

Select your next disk drive, from the range designed to meet the most demanding systems applications, because Perlec performance is world renowned.

10000 - top of the line, single platter, cartridge drive up to 24 Megabytes.
15000 - eight inch, Winchester drive, 20 Megabytes in floppy size package.
FD300 - mini floppy, 200K bytes, single head.
FD350 - mini floppy, 800K bytes, double head.
FD350 - standard floppy, 1.2 Megabyte double head.

ADVANCED FILE DESIGN — Part 11

by Owen Hanson and Norman Revell

STRUCTURES FOR DATABASES

IN Part 10 we saw how the choice of a logical data model and database management system (DBMS) determined the choice of file organisation. In general, the closer the physical storage organisation mirrors the logical data structure and processing then the better the performance of the database. In this part we shall explore the physical database organisation further by studying examples of some actual DBMS.

Inverted files for database systems

The concept of an inverted file was discussed in Basic File Design. If a file is fully inverted then it is possible to access that file using any of its data fields as a secondary key. Diagram 1 shows the simple motor car database both before and after inversion.

In practice if DASD are being used then access to the file could be provided via secondary indices as shown in Diagram 2. Also it may not be necessary to access the file via every one of its data fields, so indices are only constructed for those fields by which it is necessary to reference the file. This is known as partial inversion.

An inverted file, or set of linked files can thus form the basis of a DBMS, permitting access to the database via any specified key, provided an index has been constructed.

However, from a performance point of view there are three major drawbacks. Firstly that all relevant indices would need updating whenever a record is added to the file; secondly, that efficient batch processing is only possible in the sequence of the original file(s); and finally that at least two references are required for each record, one to the index and one to the file itself.

However, for query-type database systems this structure can work effectively and forms the basis of several DBMSs such as Adabas and System 2000. A simple example of such a DBMS is the Cromemco DBMS package designed to run on the Cromemco range of microcomputers.

This is a single user single file database system. Records are added serially to the database, and indices are maintained for designated datafields (known as sort-fields).

These indices are maintained in sequence, as in Diagram 2; so

that every addition to the database causes indices to be re-sequenced.

The overheads caused by this constant updating of index files are quite acceptable in the personal computing environment for which this DBMS is designed, but would be less acceptable for larger scale use.

This type of structure, often in indexed sequential form with secondary key indices forms the basis for some of the smaller scale minicomputer DBMSs as well as the mainframe DBMSs previously mentioned. It is possible to support a network data model by providing links between the indices of different files.

An IMS database

As mentioned in Part 10, IBM's Information Management System (IMS) is based on a hierarchical data model and offers users a choice of physical file organisation to suit their processing needs. The IMS packages consist of both a data communications system and a database system, though it is only the latter that concerns us here.

The building blocks of an IMS database are known as segments. Each segment may comprise one or more datafields, the highest level being known as the root segment.

In the simple example we have chosen, the root segment would be the car-model and the engine segment would be a child segment of the root segment (also a parent segment) in the parent-child structure outlined in Part 10.

There are four physical file organisation methods possible for an IMS database:

- HSAM, Hierarchical Sequential Access Method.
- HISAM, Hierarchical Indexed Sequential Access Method.
- HDAM, Hierarchical Direct Access Method.

HISAM stores the database as sequential fixed length records, each record comprising a root segment and as many subordinate segments as can be accommodated, overflow segments occupying the next physical record(s). Thus in our example there would be three records, one of each root segment of Fiesta, Escort, Cortina, and the engine segments would be part of their respective parent records. This method is suitable only for batch processing of the database using either magnetic tape or DASD.

HISAM stores the root segment and as many lower level segments as possible (remaining segments being held in overflow) as ISAM records, thus it is possible to access a given root segment at random via its key and thence gain access to the lower level segments.

HDAM stores all the segments separately as a chained direct file, with pointers between levels in the hierarchy and between segments at the same level. Diagram 3 illustrates how the car example might appear using HDAM. There is no significance in the physical position of segments, since they are connected via pointers, though to minimise seek times it is advantageous to place segments which are normally accessed together physically close to each other. The root segment is accessed via a randomising algorithm.

Both HDAM and HISAM may take more storage space since each segment has its associated pointers stored with it. However, the ability to access individual segments makes them suitable for online use where rapid response to transactions is required.

HISAM is similar to HDAM but uses an ISAM file as an index to the root segment and thence to lower level segments by chaining.

Both HDAM and HISAM may take more storage space since each segment has its associated pointers stored with it. However, the ability to access individual segments makes them suitable for online use where rapid response to transactions is required.

HISAM and HSAM are more suitable for an environment where there are more batch-type applications and few, if any, query-type transactions.

It is interesting to note that in the early versions of IMS, IBM was aware of the shortcomings of HSAM and used a special access method (OSAM) to handle overflow and also to form a basis for the segment chaining used in HDAM and HISAM. This was now used as a basis for HISAM, HDAM and HISAM.

From a file design point of view IMS illustrates well the two stages of performance optimisation needed for a database environment: once a DBMS has been chosen, they are:

1. Selection of appropriate physical file organisations from those supported by the DBMS.
2. Optimisation of individual files by those techniques available for single files, as dealt with in previous parts in this series.

Space does not permit us here to study in detail a network relational database system. In the case of the former, because of the more complex data model there may be an even greater overhead associated with optimising than with IMS, though this will now support more

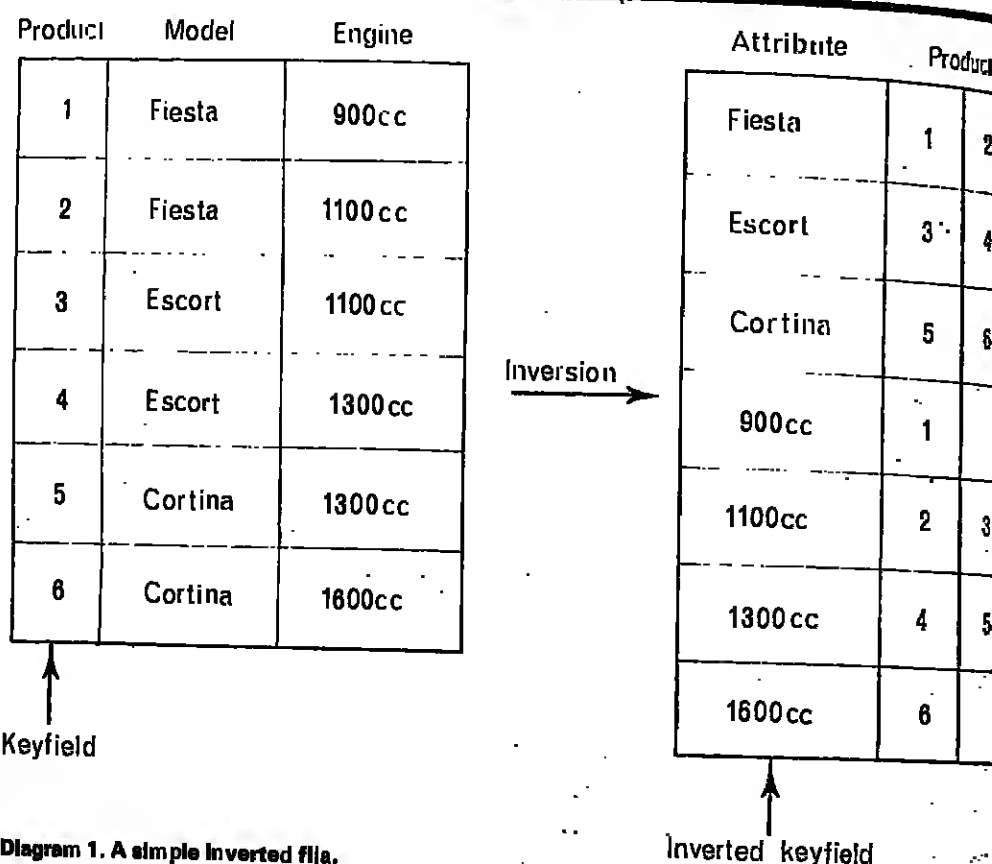

Diagram 1. A simple inverted file.

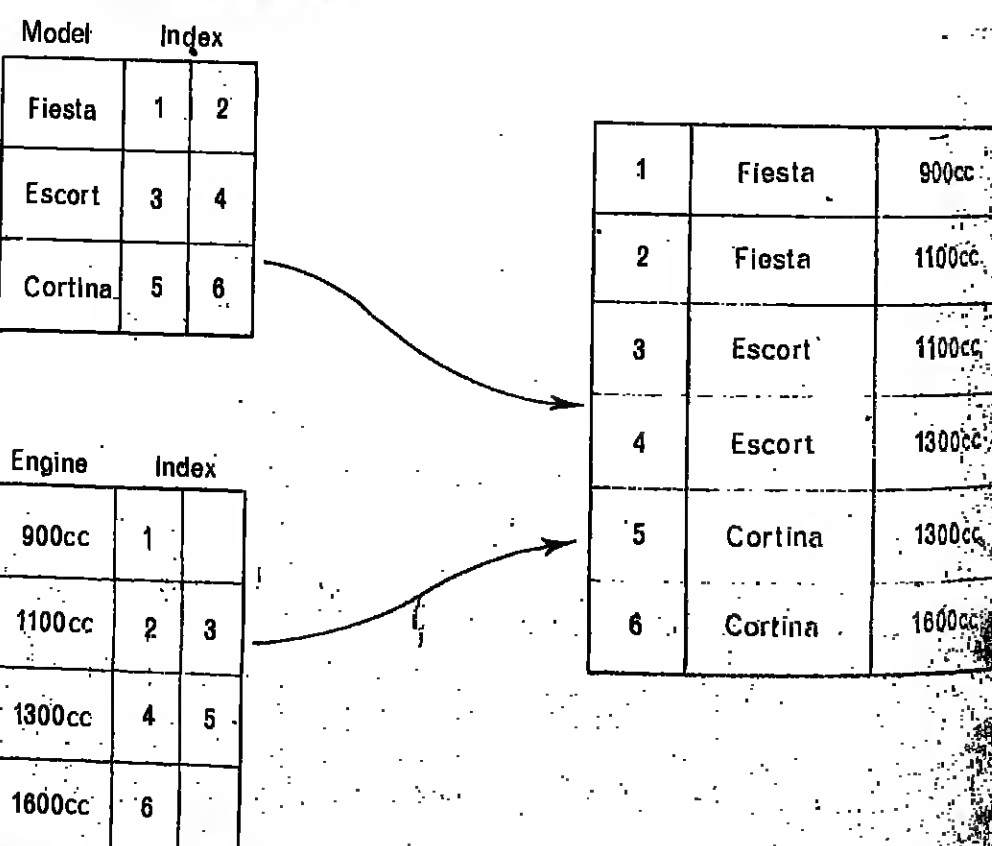

Diagram 2. Use of indices for inversion.

complex structures than simple hierarchies through use of the logical parent and logical twin concepts.

Of particular interest to the reader interested in further study might be the IDMS package which uses the Codacy data model and is available on a wide range of computers, including ICL's 2900 series, in which the physical database is constructed using a page concept.

In the case of the relational data model, no DBMS is yet in use on a wide scale which is suitable for large scale commercial applications — a major problem here being one of performance, though it is possible that new storage technologies will facilitate the development of efficient relational DBMSs and that IBM's long heralded System "R" will be launched.

Foreign exchange system links into Swift

MERCHANT bank Morgan Grenfell has developed a real time foreign exchange system on its ICL 2900 miniframes which communicates with the Swift Interbank funds transfer network in a similar way to the Direct Swift Link on IBM

mainframes. As a result, the ICL 1500 Swift Interface Device proved unsuitable to link to the network, and a General Automation 16-460 minicomputer was chosen instead. "The miniframes system pulls the terminals, but a 1500 with a

keystation is used as a polling device, and this can cause contention. We found that a software solution to resolve this would be more expensive than the GA solution. Morgan Grenfell DP manager A. R. Gibson told Computer Weekly.

The 2900s will use ICL's XBM protocol to link to the GA 16-460, and thence via a GA SID to the Swift network. The 16-460 can take over the role of the SID in the event of failure, and will also be used as a message switch.

One 2900 is currently running the live system under DME while the other is running VME/B for development. The first live hatch VME system is due in mid-summer, and the full live TP system is set for early 1981, when the 2900s will be run as a dual four-megabyte system under VME/B.

ICL chairman Philip Chappell is vice-chairman of Morgan Grenfell Holdings, but Mr Gibson told Computer Weekly that relationships with ICL were strictly at arm's length. "We do not use the connection to get better treatment from ICL and we are under no unusual pressure to buy from ICL," he said.

MEMOREX has installed an IBM 370/145 at its Staines customer engineering centre. It will be running under VM and OSVS/1 and will be used for benchmarking and customer applications.

The firm hopes that, with systems testing extended to all subsystems delivered by it, downtime will be reduced.

Our picture shows Memorex tape drives for an IBM 4300 installation being checked prior to delivery at the 40,000 square foot centre. The firm also has 11,000 square feet of offices in a preserved Georgian building at Staines.

IBM aids for PSS packet network

TWO products have been released by IBM in the UK to aid user attachment to British Telecom's PSS packet network. They have been in service for two years in Canada for use with the Dntapac, which was the first national packet network to use

the X25 protocol, and have also already been announced in France, West Germany and Holland.

One of the products is an extension to the SNA software which runs in IBM 3705 communications controllers and the

other is a hardware Network Interface Adapter which sits in the other end of the line to a 3705, or both ends of a non-SNA link.

First deliveries are planned for June 1981. The NLA costs £3,278 each or £33.30 a month.

Call for papers

A CALL for papers has been announced for the fifth annual microprocessor workshop on microprocessor applications to be held on September 1 and 2 at Liverpool University's Computer Laboratory.

Our new VDU is so good that our sales force aren't going to sell it.

The advantages of our new 3101 VDU (both in features and in price) are so marked, that it doesn't need salesmen to sell it.

Instead, you buy it direct from us. Simply pick up the phone and ring our Direct Marketing Centre in Chiswick.

Direct selling makes possible unit prices from £928. This is starting for an IBM machine that's ASCII based, Teletype compatible. Particularly when you consider its features, a few of which are outlined below.

Even more startling is the fact we are

offering quantity discounts—up to 28%. This means that retailers and other distributors can now stock and sell this new IBM visual display.

It embodies proven IBM technology, provides excellent user comfort and is very easy to operate.

Also announced is the 3102, a quiet, non-impact thermal printer.

If you would like to see the 3101, call us or visit us. And we'll tell you all about the VDU that sells itself. Or send the coupon for more information.

Direct Marketing Centre

To: IBM DIRECT MARKETING CENTRE, 389, Chiswick High Road, London W4 4AL. Tel: 01-895 1422.

Please send me more information about the new IBM 3101 VDU and the 3102 printer.

Name _____ Title _____ Company _____ Address _____ Tel. _____

Smart Micro-based Visual Display Terminals

24 lines of 80 characters per line. 96 ISO/ASCII character set. Dual interface - CCITT V24 and 20/80 mA current loop. Selectable half or full duplex. Green phosphor no glare display.

CROYDON
SURREY

LOMBARD NORTH CENTRAL LIMITED is one of the largest finance companies in the country and is part of the National Westminster Bank Group. A high growth rate has been achieved within the last few years supported by significant DP developments. The Technical Services Section of the Computer Services Department now requires an additional RSX11M System Programmer. He or she will have practical experience of RSX11M and MACRO 11. A knowledge of DECNET would be an advantage.

The current configuration includes several remote PDP 11/34's which capture regional data for transmission to duplex PDP 11/70's. These in turn communicate directly via DX11's with a 4MB IBM 3031. The SERIES IV package is used as the basis of the data preparation software on the PDP network but all linkage and ancillary software is being developed in-house.

The post offers exceptional opportunities for personal growth in a professional environment.

Lombard North Central Limited

BENEFITS offered include non-contributory pension scheme, 24 days holiday, subsidised lunches, sports and social club, and after a short qualifying period low interest mortgage and loan facilities plus profit sharing.

Apply now by telephoning Richard Morley on 01-638 0036 or send a brief C.V. to:
DILQ LIMITED Throgmorton House 15 Copthall Avenue, London EC2M 6TP

professionals seeking professionals

Whatever turns you on?

Perhaps salaries, we're talking up to £11000 (under review), or maybe location, say rural home counties, then there's the state of the art, on-line techniques, minis and micros. Most importantly, the opportunity to join a company at a time when you can influence its expansion and development.

PROGRAMMING TEAM LEADERS

to lead teams involved in the development of administrative and accounting systems, manufacturing systems, reporting

to a Project Leader, successful applicants will be responsible for design and program development.

SENIOR PROGRAMMERS

to join development teams, you should have 10+ years experience and a minimum of four years work with COBOL. Those without direct COBOL experience will be given appropriate training.

Salaries are negotiable according to the position offered and experience. Other benefits including relocation are considerable. To find out more contact Peter Humphreys.

Harrison Cowley Executive Selection
25 Queen Square, Bristol BS1 1JL Tel: 0272 221111

Financial Services Department

Computer Manager

£8,245-£10,212 (negotiable)

Applications are invited for this key post. The Computer Manager is responsible for all aspects of computing within the Council. Reporting to the Treasurer, the person appointed (male/female) will control a staff of 12. The Council operates an ICL2904 processor, 48K store, with 5 direct entry systems. Video terminals operate through an ICL7002. There are 1000 terminals on-line each minute. The main programming language is COBOL. Further development, towards on-line operating is contemplated. Flexible operating times, travelling expenses, lodging allowance, legal and relocation expenses available in appropriate cases. Sports and Social facilities.

Application forms and job descriptions are available from the General Manager's Department, Harlow District Council, 17 Avenue House, The Village, Harlow Essex CM20 1RD. Telephone: Harlow 23825 ext. 44. Closing date: 15.7.80.

HARLOW

ANALYSTS/PROGRAMMERS/ CONSULTANTS

PIM/UNICOM are two small consultancy companies working together in diverse problem areas such as micro computer based turnkey application systems, commercial (COBOL/ FORTRAN) systems, forecasting, linear programming, etc. They are currently involved in projects in Belgium, Italy and Ireland, as well as in the U.K.

They have a requirement for a numerate graduate to work in several of these problem areas. The candidate should have a knowledge of COBOL and structured programming techniques. The companies offer good career development prospects. A micro computer is available for home use and various computer bureau facilities are used as and when required.

Salary Negotiable: £5,000-£10,000

The BOOTS COMPANY, based in NOTTINGHAM, has a large, professional and progressive Management Services Department which plays an increasingly important role in the running of this successful company. The Department offers excellent TRAINING and CAREER PROSPECTS, a wide variety of complex applications together with JOB SECURITY. All the usual large company benefits apply, including RELOCATION ASSISTANCE for moving to the NOTTINGHAM area, where housing costs are LOW and the amenities are excellent.

SENIOR ANALYST PROGRAMMER TO £7K PLUS BONUS

The Boots Company has a very wide variety of General Accounting Systems. The maintenance and development of these systems are vital to the continued success of the company. We are currently seeking an analyst programmer with a minimum of 3 years experience which should include the use of COBOL on IBM equipment for commercial applications. A knowledge of PL1 would also be useful. Applicants must be prepared to take complete responsibility for at least one major system, be good communicators, and capable of working on their own initiative.

PROGRAMMER TO £6K PLUS BONUS

We are also seeking a Programmer to join the General Accounting team. A minimum of 18 months commercial experience is required. Ideally using COBOL on IBM equipment. The successful applicant will have the opportunity to work on his/her own initiative on a number of projects, and there will be contact with the User Department at an early stage.

SENIOR PROGRAMMER TO £7K PLUS BONUS

This is an extremely interesting and challenging position from both the technical and supervisory standpoints. The project is the major re-development of the Payroll, Pensions and Personnel systems for the Boots Company. The new system will make use of DATABASES, MINICOMPUTERS, MAINFRAMES and REAL-TIME TECHNIQUES. Applications are invited from candidates having a minimum of 3 years commercial experience, ideally using IBM COBOL and/or PL1. Experience in one or more of the following would be useful, but not essential: since training will be given: INTERPERS, CICS DL1, IBM 8100 and MINI-TO-HOST COMMUNICATION LINKS. This is an excellent opportunity to expand your technical skills and gain experience in managing junior staff.

For further details, contact REG. HEATH on 021-643 8501 (reverse charges) quoting reference RH/075/CW26/06.

COMPLETE SYSTEMS DEVELOPMENT

Leicester  Building Society

- ★ NEW REAL-TIME SYSTEMS TO BE RUN ON DUAL BURROUGHS B7800 MAINFRAMES
- ★ ON-LINE DATA COMMUNICATIONS NETWORK OF 250 TERMINALS AND EXPANDING
- ★ NEW PURPOSE DESIGNED COMPUTER CENTRE NEARING COMPLETION

One of the UK's "Top Ten" building societies, the Leicester, can now offer challenging careers to three further computer professionals who seek to exercise and expand their skills in a large development programme. These posts will be based at the Chief Office in Oadby, a pleasant residential area on the outskirts of the City of Leicester.

DATABASE TECHNICIAN

Salary circa £8,500

Ideally candidates will have Burroughs Large Systems DMS2 experience. However, if you have a sound technical background and practical database experience, we would still like to hear from you. Work will include instruction and creation of database standards for programmers; also interface with the systems team in designing database and data dictionary.

EXCELLENT BENEFITS PACKAGE INCLUDES:

- ★ Concessional mortgage scheme.
- ★ Flexitime.

SYSTEMS ANALYSTS

Salary circa £7,500

Applicants, ideally aged 22-29, will need a minimum of one year's on-line systems analysis and design experience, together with a strong programming background. The four major project areas under way include financial control; investments; mortgages; and agency commission system. A management information system will also be developed.

- ★ Relocation Assistance where appropriate.
- ★ Active Sports and Social Club.

BRITISH AEROSPACE

There's a future for Computer Personnel at Samlesbury

Our Samlesbury establishment is a vital link in the chain of logistics support to the Tornado multi-role combat aircraft as it draws nearer to entry into service in three European countries. Samlesbury, the Warton Division's fastest growing site, is in a pleasant rural location between Preston and Blackburn. Our immediate requirements include:

Programming Team Leader

to control the activities of a group of programmers working on a variety of Spares Supply Systems. The successful candidate must be capable of contributing to the development of effective systems designs and will be responsible for the maintenance of appropriate standards. Applicants should be qualified to HND/Degree level and have at least 7 years' programming experience, some of which must have been in an IBM 370 environment. Good working knowledge of COBOL is essential, and knowledge of CICS/DLI would be an advantage.

Senior Analysts/Analysts

To work on the development and support of a variety of Spares Supply Systems. Applicants should be qualified to HND/Degree level, and have a minimum of 2 years' experience in a commercial environment.

Senior Programmers/Programmers

with a minimum of 2 years' COBOL experience, ideally in an IBM 370/OS environment. Applicants should preferably be qualified to HND/Degree level, and knowledge of CICS/DLI would be advantageous.

For an application form, please telephone or send the coupon below to:

COMMAND + CONTROL

New projects starting in Surrey, Berks & Hants. Software designers & programmers needed. Contract or Permanent. Capabilities 27521 or 5370 day. Farnborough (Hants) GU14 7AA/UK.

UNIVERSITY OF SURREY

SYSTEMS SUPERVISOR - SRC MULTI-USER MINI

A Systems Supervisor is required to manage and control the SRC Multi User Mini (PDP 11/23) recently installed in the Computing Unit at the University of Surrey. This position has been funded by the Science Research Council (SRC) and is specifically for the use of SRC grant holders. The successful applicant will, as well as managing the system, be required to work closely with the SRC grant holders and assist with the definition and implementation of their software requirements. Subsequent to the successful completion of the SRC grant holders' requirements, the successful candidate will be required to work with other SRC grant holders and assist with the definition and implementation of their software requirements. Knowledge of Fortran is required.

This post is offered on a 3-year basis on salary scale 1A £5,002-£5,700. Salary scale 1B £5,701-£6,400 will be considered for exceptional applicants.

Applicants should send their curriculum vitae and the names and addresses of 3 referees to the Personnel Manager, University of Surrey, Guildford GU2 5XH or telephone 0424 22417 for further information.

EUROPEAN MOLECULAR BIOLOGY LABORATORY

EMBL invites applications for a vacancy at its Heidelberg laboratory as:

HEAD OF COMPUTING

The successful applicant will have overall responsibility for the organisation and coordination of operation, user support and new applications of a multi-user computer facility, specialised for laboratory data acquisition, image processing, interactive graphics and scientific data processing. The present configuration comprising 4 Nord 10 minicomputers will be expanded by a medium-size machine in the future. The salary offered will be not less than DM 4200 monthly after tax, plus certain allowances. An initial contract of 3 years will be offered.

Applicants with a University degree in computer science or a related discipline, together with several years of relevant experience, should write specifying reference 90/14.10.

Sir John Kehring, Director General, EMBL, Postfach 10 2209, D-6900 Heidelberg, Germany.

Recruitment

In Informatics

Network Project Leaders

Greater London: Salary to £12K

A well-known European Systems Supplier and Consultancy with a recently established U.K. subsidiary is seeking several Project Leaders with extensive experience of data communications and networks in a banking or other financially orientated environment. Successful candidates will preferably be graduates and aged 27-34 years. You should have a minimum of five years' programming and/or financial applications consultancy experience, gained in either a commercial,

merchant banking, stockbroking or investment orientated environment. Our clients would prefer those who have current experience in an installation having extensive mainframe and minicomputer capabilities in an on-line mode. Multi-tasking and full-scale computing techniques are particularly valued skills and will reflect in the salary offered.

Ref: L/20/A

IBM & Amdahl Systems Engineers

Germany & Switzerland: Salary £22K

We have rare opportunities for Senior Systems Engineers and Project Managers for permanent career positions in Rhineland Germany, Bavaria and Switzerland. Technically, you must demonstrate continuous exposure to the implementation or support of Data-Base and Teleprocessing systems. It is a pre-requisite to offer "hands-on" Software

experience with IMS/DB-DC; CICS/VS, MVS or with the D.B. or T.P. Software of an independent supplier. The Company offers higher than average salaries (even by Continental standards) plus a range of extensive and practical benefits. Interviews can be arranged to suit individual requirements.

Ref: L/28/B

Communications

Programmers + Engineers

W. Country: Salary to £11K

One of Europe's renowned communications companies, with a well-established and expanding MicroProducts Group, urgently requires dedicated real-time professionals for its software "workshop". The Company is based in an area of outstanding natural beauty which can offer reasonably priced housing to those wishing to relocate. Currently, you should be employed as a Software or Development Programmer/Engineer and have 2-3 years' minicomputer or microprocessor Assembler experience. It is a distinct advantage to offer a numerate degree

combined with extensive knowledge of at least one high level Programming language. Involvement with Intel 8085/8 or Zilog Z-80 micro-processors will be particularly advantageous but candidates with background in real-time military or defence applications are equally encouraged to apply. These exceptional positions require liaison with both internal and external customers and well-developed personal communications skills are, therefore, essential. Interviews can be arranged locally or in London.

Ref: L/28/C

Project Leader - Telecomms

Paris: Salary to £18K + benefits

Due to the planned expansion of its distribution network, a French company is seeking a Project Leader for its Paris-based installation. Candidates will be required to have at least 5 years' communications software experience and demonstrate the ability to lead a Project Team engaged in the development of non-homogeneous networks. The configuration

consists of Honeywell-Bull minis on-line to an IBM miniframe. As well as having responsibility for the design and development of a full communications system, the successful applicant will have the additional opportunity to assist in the evaluation and selection of new computing facilities.

Ref: L/28/D

Software Instructors

Berks/Bucks: Salary to £10K

A leading manufacturer of mini-computers is seeking several Software Teachers for its U.K. Regional Headquarters. Work content will include the staff training of both existing and prospective customers in general d.p. techniques and the individual requirements and capabilities of the company's software. Education currently takes the form of product demonstrations, seminars, workshops and, of course, inevitable "on-the-job" learning. The development of software courses in

areas not so far covered by the company will form an essential and integral part of the position. The company has a stated preference for candidates who can combine previous FORTRAN and/or ASSEMBLER programming in a practical environment with past or current experience as a Software Lecturer or Trainer in an academic or manufacturing environment.

Ref: L/28/E

Scientific Programmers

West Germany: Salary to £18K

A Scandinavian Systems Supplier is further expanding its team members in the areas of Image Processing, Operational Research, Modelling and Graphics. It is an essential part of the company's strategy that all Applications Programmers after holding depth FORTRAN and ASSEMBLER programming experience in a mini-computer

environment. Systems Programmers who can offer experience in the development and implementation of complex and operating systems are also encouraged to apply. There will be future opportunities to work for the Company in other Continental European locations.

Database Development

Belgium to c. £30,000

One of the most highly respected Consulting organisations in the U.K. is currently running a major database development project in Belgium, for which two Senior Consultants are required as follows:

Database Administrator

A thorough technical background is required for this position, with particular emphasis on the IBM DB/DC database system. The successful candidate will have extensive experience in the use of the DB/DC database system.

Database Designer/Analyst

Again, sound technical experience is required but with more emphasis on the analysis design aspect. Full data analysis experience would be a major bonus, as would in-depth knowledge of large IBM installations and a financial system background.

The project is long term and likely to grow in scope and size. Therefore, a willingness to move to Belgium on a permanent basis, although not an absolute requirement, would be extremely useful. Career opportunities and financial rewards are both exceptional.

Contact: Andy Wright

IMS Database Administrator

Scandinavia to £30,000

A London based Consultancy, of the highest repute in its field, currently has an extremely challenging assignment in one of the major Scandinavian cities for an experienced Project Leader or Senior Analyst with extensive IMS experience. The appointee will establish the Database Administration role for a large organisation which is going to be switching to a fully IMS data system. In conjunction with other senior members of the Consultancy, who will be carrying out other analysis, design and project management functions.

Our client will consider candidates only if they possess the requisite technical background, and candidates can be assured that the above assignment would only be the first of many in the database field.

Contact: Andy Wright

Systems Programmers

City Based c. £9,500

An international management consultancy are in the process of developing and marketing a range of applications software for mini-based systems, and need experienced people in job, their highly professional team.

A minimum of 2 years experience of minicomputer applications with a preference for DBOL and BASIC languages. The ability to communicate with people at all levels is desirable.

The organisation believes in career development and therefore, candidates with the right skills and background would have every opportunity to progress. Contact: Janet Chilvers

Senior Systems Analyst

West London Neg. to £9,000 + car

A vacancy exists with a mini computer manufacturer for an experienced Analyst, used to working on a variety of commercial business systems, to join a small but highly effective team. The work involves the translation of customer requirements into systems definition, design, and the subsequent implementation of the finished system.

The successful appointee will have sound analytical skills, be able to demonstrate a working knowledge of on-line systems, and have a broad understanding of most facets of business systems development. Written and oral communication is of paramount importance. Excellent career prospects.

Contact: Margaret Stevens

Data Processing Manager

Hampshire c. £8,500

The continuing expansion of the U.K. branch of this aggressive and highly successful international marketing and distribution company, has led to an urgent need to establish an in-house d.p. service. A System 34 has therefore been ordered and is due for installation within the next few months, but since no d.p. expertise exists in the company at all, a Senior Analyst/Programmer is required to set up and run the service.

Candidates must have extensive System 34 experience and be completely fluent in RPG II. The ability to initiate, develop and implement new systems is essential and an outgoing and communicative personality will be sought.

Contact: Andy Wright

Analyst/Programmers

London, EC2 up to £8,500

A very successful international organisation wishes to recruit several ANALYST/PROGRAMMERS to work in small teams to develop commercial on-line applications on an HP 3000.

Candidates should have three years programming experience together with some involvement in the design of systems. A background of minicomputers is obviously desirable but not mandatory as training will be given where appropriate. Interesting and friendly environment.

Contact: Jim Baker

COBOL Programmers and

Senior Programmers

Gloucester £8,000 - £8,000

A number of positions are available for programmers with from 1 to 4 years COBOL experience to join our client's new team, developing and redesigning their manufacturing and reporting systems on a new HP3000.

Applicants for senior positions, i.e. 3 years +, are expected to possess on-line systems experience and be fluent and effective in spec. writing. A knowledge of structured programming would be a marked advantage and candidates should have good management potential.

A relocation package is available for those wishing to move to this beautiful part of the country plus all the normal fringe benefits.

Contact: Brian Postles

Graduates - Micro Systems

Cambridge c. £5,000 +

A small but rapidly growing development group have entered the second phase of a word processor system project and require additional design people. The current work involves the communications ring network, utilising portable software.

Candidates must be totally computer orientated and conversant with languages such as BCPL, PASCAL, RTL2, etc. The ability to work in a team and take on responsibility is important, together with a natural creative drive. Excellent prospects for right candidates.

4 REASONS WHY COBOL PROGRAMMERS SHOULD READ THIS

1. Plenty of interesting development work, using the latest methods — including Database, Transaction Processing and Communications — on a modern mainframe.
2. Based in the heart of London, handy for tubes, main-line stations, shops, theatres, etc.
3. Very good earnings, in the £8,000 to £10,000 bracket to start, according to experience.
4. Excellent scope to upgrade your experience — good training budget and the chance to work to sound professional standards.

We are recruiting on behalf of clients, a large West End installation. This opportunity will interest programmers with at least 1½ years' practical programming experience, including COBOL. Team leadership ability is required at the upper end of the salary range.

Ring us now for a confidential talk, quoting ref. 156CW, or leave a message on our answering machine after hours.

Computer Systems Engineers

Office of the future **W. Country.**
Our client requires three experienced computer engineers to install integrated electronic office systems at pilot sites in the UK. The heart of the system is a unique distributed intelligence processor. Candidates must be prepared to spend 4 to 6 months in California for training on this machine. Computer telecomm and software knowledge are required. Your experience will be used to form a base of expertise in this attractive West Country location. Salaries c. £10,000.

Senior Micro Engineer

S. Bucks **to £9,000**
Our client requires an experienced microprocessor engineer to join a micro systems section in their process control R & D centre. You will investigate, design and install new micro based applications throughout the company's plants in UK. A mix of software and hardware skills is desirable. Suggested experience will be with 280, 6800, 8080 or similar.

Micro Enthusiasts

W. Herts **c. £6,000**
Bright, young qualified candidates are required to work as programmers and engineers on a world leading micro system. There are opportunities in support, marketing and engineering repair. Excellent ground floor positions.

Applications Development Trainee Programmers

C. London **£ generous**
A large management consultancy is offering the opportunity for several candidates to develop their programming skills working on package development on IBM 5100, PDP 11/34 and Wang 2200 minis. You must have a degree or equivalent and the potential to develop within the company.

Computer Services Manager Speke

We are responsible for the UK manufacture of Glaxo Pharmaceuticals and their sale in this country. The Company is engaged in the implementation of a large network of Hewlett-Packard HP 3000 mini-computers involving all Company locations and based around a large central ICL mainframe. There is a major development programme of advanced on-line systems being built around a distributed database, predominantly in the production planning and recording, inventory control and quality assurance areas.

We wish to appoint a manager for the Speke installation which has two mini-computers, one of which is linked to the ICL network and the other linked to a central ICL mainframe.

The successful candidate will manage a team of twelve people and must be able to demonstrate sound technical and operational capabilities and management judgement, and be able to establish good working relationships at all levels in an environment that will demand a high service level and personal commitment. The manager must be able to spearhead developments of significant importance to the Speke factory while also contributing to the Company programme of systems development. He or she will be expected personally to undertake systems analysis and have sound programming experience.

Experience in an on-line environment and of manufacturing systems in a chemical or pharmaceutical industry would be an important advantage and recent management or supervisory experience is essential.

Attractive conditions of employment include profit sharing scheme, non-contributory pension scheme, and assistance with relocation where appropriate.

Please write for an application form to: Mrs V. A. Waters, Personnel Officer, Glaxo Operations (UK) Ltd., Greenford Road, Greenford, Middlesex, or call 01-422 3434, ext. 340, quoting ref. FY 116. (1743)

PDP PROGRAMMERS

Our Associated Company, Logsys Computer Services, is a Software House based in Berkshire, that specialises both in the provision of expertise for real-time and complex software projects, and in providing commercial systems, on PDP and VAX hardware. Specifically at the moment they require:

MACRO or CORAL — to £8,000 — S. OXON

Senior programmer for No. 2 position in real-time project. Ideally, applicants should have Device Driver design experience. Genuine opportunities to move onto VAX or into system design.

RTL2 — to £7,500 — EPSOM

Programmers to work on PDP 11, MTS real-time Radar processing project.

BASIC + — to £6,500 — CROWTHORNE

Experienced programmer for work on commercial systems both for first time and also more experienced users. If you are considering a career move Logsys can genuinely offer progressive, challenging and satisfying work, excellent salaries + expenses, and a relaxed, informal but professional company attitude.

To discuss these permanent positions please telephone Mike Wilson on Crowthorne 77921 or 3370 (day) or Farnborough (Hants) 45083 (even./weekend).

Computer & Management Personnel, 78 Little Brick Lane, London, E.C.1.

AEROSPACE PROJECTS West Germany

Analyst Programmers/ Systems Programmers

DM 50,000 — DM 80,000

Science Systems Ltd., a systems house specialising in the scientific/technical areas of computing, are seeking to recruit a number of experienced personnel to work on advanced technology projects in West Germany.

Ideally candidates should possess a numerate degree and have had a minimum of two years programming experience in a real-time environment using FORTRAN and/or ASSEMBLER.

Exposure to any of the following hardware would be extremely advantageous.

SEL 32/70 series **HP 2100**
MODCOMP 4/Classic **ITT 3200**
SIEMENS 330 **SIGMA 7/9**
UNIVAC 1100 **HONEYWELL 6 or 66**

SYSTEMS SOFTWARE PROGRAMMERS

THAMES VALLEY

£7-£10,000

A commitment to new systems software product development has now created a range of positions with our client, a major mini computer manufacturer based near Windsor in the Thames Valley. These are systems software programming positions which will offer the successful candidates the opportunity to perform design and programming work on new software products related to interactive systems, teleprocessing and database.

Ideally applicants will offer a minimum of three years of Assembler level programming experience, together with some software design knowledge and the people appointed can expect to contribute fully to all aspects of the development.

The company is pleasantly situated in modern offices and offers benefits including relocation and subsidised restaurant facilities.

REF. NW1/2606

POTENTIAL ANALYSTS

N.W. LONDON

TO £8,500

Our client is a market leader in its particular sector of the retail industry and wishes to recruit additional Analyst/Programmers to develop their own careers into analysts.

Employing the use of database facilities in many applications, the successful applicants will join small project teams assigned to develop commercial systems from feasibility to successful implementation. Based towards the financial areas of business, candidates will be encouraged to become fully involved in all aspects of systems design, user liaison and system implementation. Formal training will be provided where necessary in all areas of Data Processing.

Successful applicants will be able to offer at least three years' DP experience, ideally in an IBM environment, and have had some exposure to systems analysis in an analyst/programming position.

In addition to a positive career path a full range of company benefits is offered including a generous discount on company products.

REF. NI/2606

BUSINESS SYSTEMS ANALYSIS

WILTSHIRE

£7-£9,000

Our client, a major commercial organisation, is seeking to recruit systems analysts wishing to undertake challenging project work in a highly successful business environment.

Current project work includes the development of teleprocessing systems based upon advanced hardware and candidates can expect to gain valuable new systems experience as well as utilising their own background to the best effect.

A sound commercial systems background is required together with business systems appreciation as the role will require the development of systems from initial business feasibility, through design to implementation.

The company offers a package of benefits which one would expect from a successful business operation and this obviously includes relocation assistance to this very attractive area of the U.K.

REF. NW2/2606

ANALYSTS TO SENIOR ANALYSTS

NORTH OF LONDON

£8,000-£11,000

Reflecting the demand of their users, our clients have vacancies for experienced Systems Analysts.

Joining a company whose Data Processing is still developing will provide scope for individual advancement and opportunities to take full project control responsibility for certain systems. Employing Database and on-line techniques in nearly all new developments on their IBM mainframes will provide a stimulating environment to design and implement systems encompassing financial, stock movements and business forecasting systems.

Candidates should possess a solid DP background, preferably through a programming discipline, and have successfully controlled the implementation of at least one commercial system.

In addition to attractive starting salaries, comprehensive conditions of employment apply together with the assurance of career progression geared to individual merit and performance.

REF. NI/2606

SYSTEMS ANALYSTS

CITY

TO £10,000

This is an exciting opportunity for experienced Systems Analysts to effect an important career move.

Our client, located in the City, is seeking to expand its range of projects under development by recruiting additional systems staff.

If you can offer:

- Two years plus experience.
- Involvement in at least one project.
- The potential for project leadership.

Our client can offer:

- A stimulating and highly professional environment.
- Excellent career progression.
- Extensive development work using advanced techniques.
- A starting salary to £10,000 + good benefits.

Our client will also consider Analyst/Programmers who wish to move into a full systems analysis role.

REF. E2/2606

PROGRAMMERS TO PROJECT LEADERS

LONDON/S.W. ESSEX

£6,000-£9,500

Our client has outstanding openings for PROGRAMMERS through to ANALYST/PROGRAMMERS and PROJECT LEADERS. Successful candidates will work within a stimulating and highly professional environment using the most advanced techniques on a range of development projects.

PROGRAMMERS should have a minimum of one year's COBOL programming experience.

ANALYST/PROGRAMMERS should have a minimum of two years' experience; these positions will appeal to Senior Programmers who wish to move into systems analysis.

PROJECT LEADERS should be capable of designing and controlling projects from feasibility to implementation. In addition to real-time experience, a programming background is desirable.

Salaries cover the range £6,000 to £9,500 depending on the position.

The company has an outstanding record of growth and offers a secure and progressive career to the people appointed.

REF. E1/2606

TECHNICAL PROGRAMMERS

N. SURREY

c. £8,500

As modern technology surges ahead, so is the demand for machine-oriented programmers who are capable of adapting to a range of small, yet powerful, machines. Our Client would like to discuss the positions which are currently available at their NORTH SURREY offices for LOW-LEVEL PROGRAMMERS seeking to develop "state-of-the-art" software. Some of these vacancies may well be filled by Systems Programmers, currently at mainframe installations, who would like a more interesting challenge, coupled with project management responsibilities.

The Company is a completely autonomous subsidiary within a very large group and is therefore able to offer a secure future and positive career to all employees, with rapid advancement for those persons displaying above average talents. For further information regarding these positions, please telephone 01-353 0981, quoting

REF. S2/2606

MOVE TO ANALYSIS

C. LONDON

£6,500-£8,500

Three ANALYST/PROGRAMMERS will strengthen a project team which has just completed the initial stage of a real-time, financial system. They will assist with the system design, program specification/development and the subsequent implementation of the system on advanced mainframe equipment. Great importance is placed on the "top-down" approach to program design so applicants should be conversant with this methodology whilst possessing a sound knowledge of COBOL.

On completion of this project, they will join systems teams to investigate user requests and be responsible for the feasibility studies under the direct guidance of a Senior Analyst.

Based in CENTRAL LONDON, one of the positions will be filled by a junior person in the salary range £5,500-£7,500 and the other two will expect to be £8,500 p.a. depending on their experience.

COUNTY SURVEYOR'S DEPARTMENT

Invites applications for:

Analyst/ Programmer

£5,973-L/077 (review 1st July, 1980)

The Technical Services Group provides a support and development service to the Department in all non-financial applications.

The range of systems in use includes highway and bridge design, survey analysis, management information systems, etc.

The County Council has an ICL 3904S computer which is also to be replaced by a larger ICL 3974 machine running under VME/B. The Department has extensive facilities including RJE and video terminals, teletype terminals, desktop computers and a Benson of the riding system. The most current is the conversion of all existing systems on to ICL 3974.

Applicants should have an understanding of financial background and a relevant degree or HND/HNC with substantial experience in the design and development of a computer system. A knowledge of FORTRAN is required. Experience of COBOL and ICL GEORGE III or VME/B is desirable.

Relocation expenses payable in appropriate circumstances starting salary dependent on experience.

Application forms and job specification available from the County Surveyor, Mr. Peter A. Jones, Cudger, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

OPPORTUNITIES WITH THE CEGB

The Central Electricity Generating Board, responsible for generation and transmission of electricity throughout most of Britain, has computing support from a Headquarters Centre operating IBM-based services, Regional Centres using ICL main frames, and minicomputer systems for process control and real-time operation.

PROJECT LEADER/SENIOR ANALYST-NETWORK DEVELOPMENT

More widespread and varied use of computing brings a need to make decisions regarding the form future data communication facilities will take and someone is now needed to contribute to the planning and design of a corporate data communications network and to work as required in progressing software development projects.

Applications for this post, based at London Headquarters, are invited from persons holding a good degree in a science or related subject, and have experience in some of the following areas:

- programming and program design, including data communications or real-time systems;
- data communications, architectures and protocols, trends in computing and data communication.

Ability to consult and prepare information for both technical and managerial staff, and knowledge/experience to undertake detailed planning activities, is a firm requirement. Ref. CW/139.

CONSULTANT-PROCESS CONTROL AND SPECIAL PURPOSE COMPUTING

An experienced computer person is needed to work on software projects covering a range of applications supporting data acquisition and plant control requirements. These applications use real-time mini and microcomputer systems to provide data collection and recording, VDU display presentations and telecommunications and control facilities.

Project teams are engaged in design and development of application and systems software and advanced techniques are being developed and applied to ease the system evolution process, maintain high standards and reduce life-cycle costs.

The post is at London Headquarters and applications are invited from persons interested in working on design and implementation of significant schemes. Candidates should be of degree level and have several years experience including programming/systems analysis, design and implementation of application and/or system software, liaison with users from initial assessment of specifications to system testing and acceptance, design and leadership responsibilities within a software project team framework. Applicants should also have an awareness of and interest in today's software design and development techniques.

Experience with minicomputer or microcomputer system development, real-time operating systems, or the programming language CORAL, though not essential, would be an advantage. Necessary training would be given. Ref. CW/137.

Each appointment will be within a salary range of £11,916-£15,081 per annum inclusive.

Applications stating full relevant details and present salary to the Group Personnel Officer, CEGB, Sudbury House, 15 Newgate Street, London EC1A 7AU, by 7 July 1980 quoting appropriate reference.

CENTRAL ELECTRICITY GENERATING BOARD
HEADQUARTERS

IBM OPERATORS

c. £5000 + 20% SHIFT ALLOWANCE
+ OVERTIME

Once again we are looking for experienced operators to fill the gaps left by transfers to our programming training scheme.

Applicants should have at least 6 months actual experience operating an IBM 370 range computer, in a multi-programming environment, under DOS/VS, POWER/VS. Full working knowledge of POWER/VS commands.

Additional experience of operating TP processes and a working knowledge of EPAT and Catalogue Procedures would be of considerable advantage as would any commercial experience gained prior to operating.

The IBM 370 range was introduced in 1974 and in addition to being Britain's largest unit trust group is also a major force in life assurance, pensions and savings. Our main administrative offices are at Gains Hill, Ilford but we shall be relocating the Computer Department to central Romford during the latter half of 1982.

The installation comprises:
IBM 370/148
5x 3420 Model 8
3x 4033/344 2100 MB ON-LINE
2x 3203 Model 4
1x 3201

Various TP equipment local and remote.
We operate a 4 shift system which results in being "off work" but on "standby" 1 week in 4 to cover holidays and other absences. Overtime is paid for such additional hours worked and an operator should earn between £2000-£5000 per annum in overtime payments.

We are a progressive organisation whose policy is to promote from within, providing AUTOMATIC TRAINING with opportunities for operations personnel to join a formalised PROGRAMMING TRAINING course. Employee benefits include a non-contributory pension and life assurance, 30 day holiday, 12.5% pay per day, and a bonus plan (after qualifying period). 30 day holiday, 12.5% pay per day, and a bonus plan (after qualifying period). 30 day holiday, 12.5% pay per day, and a bonus plan (after qualifying period).

All applicants will be expected to provide an aptitude test which is a pre-requisite of an interview.

Send your CV to: Mr. Dickinson, c/o IBM, 3420 Gains Hill, Ilford, Essex, or to the nearest IBM office.

SAVE & PROSPER GROUP

Field Engineers Support Engineers

PRCI (UK) Limited is the British company of the world's largest information sciences corporation with a substantial investment programme in the UK. Just to prove the point to you, we are adding Manchester and Wakefield to our network.

We need support and field staff for those two new operating teams, and additional personnel in Twickenham.

You should have a good knowledge of engineering with particular reference to Digital Equipment Corporation or Prime operating systems.

The benefits of working for us in these posts amount to about £12000 p.a. including car health and salary protection schemes. In the longer term, career and salary opportunities are difficult to match and are worldwide.

Telephone or write with details to Barbara Clark, Planning Research Corporation International (UK) Limited, St George's House, Church Street, Twickenham, Middlesex. Tel: 01-891 4021. Interviews will be held locally.

Systems Programmers for new DP Centre, London

Our new DP Centre, houses two IBM 370/158AP processors, and is shortly to be supplemented by a 3033N. Our increasing commitment to terminal based systems has led to a need for three more systems programmers with 2 to 3 years' experience of operating system and/or teleprocessing software and with a sound current knowledge of one or more of the following: MVS, SE, JES2, TSO, CICS, VSPC, ACF/VTAM in a system programming environment.

A highly competitive remuneration package is negotiable dependent upon experience and qualifications. Additional generous benefits include low-cost mortgage and non-contributory pension schemes together with flexible working hours.

Please forward a detailed curriculum vitae to:

Senior Systems Analyst Management Consultancy North West

to £12,500

Our clients are expanding their data processing capabilities with a new project starting in the North West. To complete the team, they need two Senior Systems Analysts to undertake the design and systems specification of a Project Management Information System.

As Consultants, their work includes most aspects of data processing: from application design through to systems software. Generally their work involves solving prob-

lems with multi-discipline teams, where opportunities exist for broadening or increasing your depth of knowledge. They offer interesting and varied work, where personal fulfilment can be achieved whilst improving your professional status.

On completion of this project, they can offer considerable opportunities both in the UK and overseas.

Please telephone James Vailles on 01-499 3410, or write to him at Austin Knight Limited, London W1A 1DS. Applications will be forwarded to the client concerned, therefore candidates in which you are not interested should be listed in a covering letter.

THINK BIG THINK FUTURE THINK PROCESS CONTROL

OPPORTUNITIES FOR SOFTWARE AND HARDWARE PEOPLE

- Salaries to £9,500 p.a.
- International travel
- Project responsibility
- Based in North Herts

Process control is one of the fastest growing sectors on the international scene and our client has bulging order books to prove it.

Demand for their digital process control and instrumentation systems has created brand new vacancies with excellent career development prospects for systems engineers, hardware engineers and applications programmers.

Ideally we are looking for people with mini computer or instrumentation background, possibly gained with a computer manufacturer. You should preferably have HNC or a degree in a numerical discipline and applications programmers should be familiar with at least one assembler level language.

The work could involve some overseas travel and you will be continually trained to keep your experience up to date with new technology. These are excellent opportunities for career minded men and women.

Salaries are competitive, working conditions are very good and the company will help with relocation costs where appropriate.

We have more information on the company, its products and its future plans. Call Mary Stone for the facts or write to the address below:

271 High Street
Berkhamsted, Herts.
Phone: (04427) 73151

NORTHERN APPOINTMENTS

Where the grass is greener.....

THERE has never been a better opportunity for people in DP to develop their careers in the North. Unfortunately the individual is often faced with a bewildering and confusing selection of seemingly good career opportunities.

How do you sort the wheat from the chaff? Is the right move for you? Should you even be considering moving from your present company? These are questions not easily answered.

Someone has to sort through the maze and pick out the right career opportunity, the correct move for you.

It is essential that the person entrusted with this is a fellow professional with practical experience in your area of specialisation.

The consultancy should preferably be seen to have a policy of employing high calibre, mature and experienced consultants to enable the completion of recruiting assignments over a broad range of high technology industries.

A professional consultancy has in-depth experience in creating job specifications; writing advertising copy; placing it in the right publications; reviewing salary scales; interviewing and screening; presenting short lists; and arranging letters of offers and subsequent acceptance.

While looking for the professional consultancy, it is always preferable to choose one with an office not only in the North but in other locations. This will ensure that the full range of opportunities available for the development of your career can readily be identified.

When you are finally talking "over a desk" with a consultancy, ask the consultant to explain the modus operandi of the organisation, what relevant experience the consultants have, job and company specifications, procedure for submission to prospective employees and progress reporting.

Remember he is acting on your behalf and the more professional his approach is to companies, the better you will appear as a potential employee.

Photocopied application forms or hastily prepared resumes will not put you in a good light. When you have decided that the consultancy is professional enough to represent you, and you feel comfortable, then you should start discussing your background and aspirations for the future. During your discussion

the consultant will be building up a picture of your past experience and through asking relevant questions, will be identifying areas where your skills and potential can be directed to the advantage of your career.

When he has identified opportunities he will discuss the background of employers, including their employment package, relocation details, career progression and working environment including the individual personalities within these companies.

He will also be able to advise on housing in the North, areas to avoid, estate agents and mortgage companies to contact.

There are so many career opportunities not advertised in the North that the individual can only hope to hear about a small percentage of these through his own resources.

There are computer manufacturers, both expanding and opening new offices in the area; computer bureaux and software houses going through large expansion phases; and there are numerous user companies, from the smallest mini through to the largest

data processing installation in Europe, undergoing developments in the areas of distributed processing, communications, databases, CAD, and microtechnology.

Another advantage of the North for people moving into the area is housing, up to 50 per cent cheaper than comparable houses in the South.

The professional consultancy will guide you through the maze, and open windows and doors to Northern opportunities you may not even have considered.

So many people have had bad experiences with the smaller consultancies, that time spent talking to a professional consultancy's Northern office could change your career direction and ultimately change your life.

Your skills as a field engineer; in operations; in programming and analysis; in sales or marketing, at all levels, have been earned. So choose wisely and carefully that professional consultancy — via which path the grass is greener.

● The author is a senior consultant with the Manchester based firm, IMPC.

Northern Computer Opportunity

YORKSHIRE-BASED SALES EXECUTIVE

Approx. £16,000 p.a. + car (+ guarantee)

Experienced Salesman to open up Leeds office, and sell minicomputer systems in the East of the Fannines. Customers include large, well-known international companies. Products already have a 'Big' name and have 'Sold Well' for years.

REF: JG26

SELL IN SCOTLAND (BE YOUR OWN BOSS)

c. £16,000 p.a. + car (+ guarantees)

Our Clients require a self-supporting Sales Executive to be responsible for Sales and Support in Scotland. There is an existing user base and more to come. You will be selling a very successful internationally recognised minicomputer system. The whole system is 'UNIQUE'. Existing customers are household names.

REF: JG24

These are new positions, and are the start of UK-wide expansion. GUARANTEED ANNUAL INCOME of £10K (+ EVERY YEAR).

UNIQUE OPPORTUNITIES IN REAL TIME INDUSTRIAL SYSTEMS

YORKSHIRE MOORS

START up to £8,500

SYSTEMS ANALYSIS & DESIGN · PROGRAMMING · LOGIC DESIGN

The Company is a specialist in the REAL-TIME field, in control, logging and monitoring with applications in a wide range of INDUSTRIAL and TECHNICAL markets. Vacancies exist for all levels of experienced HARDWARE and SOFTWARE staff, offering considerable scope for innovation and initiative. Excellent long term career prospects.

MICRO's

Wide range of applications where staff take responsibility for individual projects including low power applications. Experience of MICRO electronics and/or high and low level languages or digital systems design is required.

Join a small rapidly expanding group with multi-national backing, but with the attractions normally found with a small company approach to business. These are outstanding opportunities in Rural Yorkshire, Cleveland within easy travelling of Dales, Moors and Seaside Resorts. Their office premises are based in a small market town, on your doorstep are excellent sporting facilities such as fishing, sailing and walking. Housing costs are most competitive in this attractive greenbelt area.

MINI's

Experience with DEC, SPERRY or CAI machines are of particular interest, with operating systems and languages appropriate in REAL-TIME applications. (ASSEMBLER, CORAL, RTL2 etc.)

If you have good academic background and experience in this field regardless of age then these vacancies will certainly be of interest to you.

For further information phone IRENE ROGERS on Sheffield (0742) 738794 (office hours) or Wakefield (0924) 71810 (evenings/weekends). Alternatively write in confidence to the Sheffield Office.

MANCHESTER

Senior Systems Programmer Salary £8,500

A Senior Systems Programmer is now required for this client who is about to take delivery of the first of 2 IBM 4341s running under C/VS1 to support a sophisticated distributed processing network using DEC PDP11/70 hardware. Responsibilities will include ensuring that all computer operating systems and associated software, including telecommunications software, and database systems is tested, installed and maintained, and planning cells for a given background in IBM software and database systems. The candidate must have a minimum of 5 years experience in the above fields, and be able to work in a team. A full range of benefits is available. Terms and conditions of employment are commensurate with those of large companies, including generous relocation expenses. Ref: CW 1680

SOUTH MANCHESTER

Programmers and Systems Analysts

Our Client has recently purchased an intelligent network control system and now seeks communications based staff in either programming or systems analysis discipline to work in their Communications based systems. In particular, they require staff for the technically oriented areas of on-line test-time and systems recovery. Software Programmers with UNIVAC 1100 ASSEMBLER would be of particular interest. Terms and Conditions of employment are first-class, including flexible, subsidised mortgage facility and normal conditions associated with a large Banking organisation. Ref: CW 3960

SALE, CHESHIRE FEDERATED

Senior Programmer Salary up to £9,000 - INSURANCE COMPANY LIMITED

Cheshire Federated Insurance Company Ltd is a progressive Company whose main Office is located in a prime position in the City of Manchester. The Company is currently seeking a Senior Programmer to join its team. The successful candidate will be responsible for the development and maintenance of the Company's computer systems. The candidate must have a minimum of 5 years experience in the above fields, and be able to work in a team. A full range of benefits is available. Terms and conditions of employment are commensurate with those of large companies, including generous relocation expenses. Ref: CW 3960

PRESTON

1 Senior Systems Analyst Salary up to £7,800

3 Systems Analysts Salary up to £7,400

The Computer Services Division of a National Organisation has recently embarked on a dramatic expansion programme, utilising 3 x IBM 1100s supporting 28 x V77 microcomputers in an exciting telecommunications environment. To enhance the existing capabilities team, they now require 1 Senior Systems Analyst who will be engaged on the systems analysis and design of new in-house projects and it will also be necessary for him to have a minimum of 5 years experience in the above fields. The successful candidate will be engaged on other commercial projects and will have approximately 2/3 years experience of systems design, preferably including some on-line experience. Although a degree background would be useful, the Client will provide full direct training as necessary. These vacancies represent excellent long-term career prospects with a Company totally committed to a D.P. expansion programme. Assistance with relocation expenses where necessary. Ref: CW 2580

SOUTH MANCHESTER

Chief Programmer Salary up to £9,000

Senior Programmer Salary up to £7,500

As the Computer Services Centre for a major engineering organisation, our client offers comprehensive group computing services based on IBM 3033 hardware, with an extensive telecommunications network supporting remote job entry, timesharing and on-line users. The expanding development of on-line systems has resulted in the need for additional senior staff with a professional and ambitious approach. Ideally they require candidates with a minimum of 3 years COBOL experience preferably on IBM equipment. A knowledge of IMS and on-line techniques would be an added advantage. Attractive large company benefits apply including relocation expenses where necessary. Ref: CW 4678

Outstanding Opportunities

Our client, a well known company with
strong international connections, has a
most enviable record of sustained
profitable growth.

This growth continues and is expected to
accelerate in rate and to support this
expansion the existing data processing
department is to be strengthened in the
systems development section.

The overall prospects for advancement
are excellent and the general working
conditions and financial rewards, which
include relocation assistance, will stand
favourable comparison with any in the
region.

Interested candidates should contact
Ivor Norton at the Harrogate Office
quoting the appropriate reference.

PROJECT MANAGER

This position will present an experienced systems analyst with a
challenging and stimulating job. Candidates must be able to work at a
senior level with users and be capable of controlling the work of a
small team. Previous experience, which should ideally include a
programming background, should have involved the development of
computer based systems in the areas of stock control and large scale
customer order processing and accounting. (Reference CW/8060)

SYSTEMS ANALYST

Candidates for this position must have at least two years experience in
systems analysis and design, following a period as a programmer.
Previous applications experience should include stock control and
order processing. (Reference CW/8061)

PROGRAMMER

An excellent opportunity exists for a young COBOL programmer to join
this small but ambitious development group. The only requirements of
our client are two years COBOL plus the initiative and enthusiasm to
warrant further promotion at an early date. (Reference CW/8062)

IMI

Systems Analyst/ Programmer Baldon

IMI Marston Radiators Limited is a leading
national producer of heat exchangers for the
vehicle and engineering industries. It is a multi-
plant company with an impressive growth
record and plans for further expansion.
We are now seeking a young SYSTEMS
ANALYST/PROGRAMMER to work on the
development of communications based
systems on a wide range of applications using a
modern Honeywell computer. The job offers
considerable challenge and scope for self-
development.

Applicants (male or female) should have at
least 2 years cobol programming experience
and have successfully implemented at least one
major system. Ideally in a communications
environment. Experience of Honeywell
computers would be an advantage.

The Company offers a competitive and
progressive remuneration package and a first
class working environment. Assistance will be
given with relocation expenses where
appropriate. For more information and an
application form contact: Ellen Jack,
Headquarters Personnel Department,
IMI Marston Radiators Ltd., Baldon House,
Overy Road, Baldon, West Yorkshire BD17 7AR.

on weekdays.

South Yorkshire County Council PLANNING DEPARTMENT

Junior Planning Assistant (Computers)

POST REF: P187 Grade AP2/5
Salary £3,990 to £8,381

The Planning Department is looking for a
Programmer/Analyst with suitable experience to join a small
team engaged in programming and systems work. In addition
to undertaking general programming duties, the successful
candidate will contribute towards developing computer
systems to meet the data processing needs of the Department.

Applicants must have a working knowledge of COBOL
and, preferably, FORTRAN. Experience in the use of ICL
mainframe and packages and the GEORGE 9 Operating
System would be an advantage. Applications will be
considered from trainee programmers as well as from persons
with more experience.

The Department is linked via VDU to the County Council's
18045 computer and also has access to a CAMAC
Plotter/Printer. Further information can be obtained by
contacting Dave Wilson, Barlham 88141. Ext. 482.

Closing date for applications will be 15th July 1980.

Please write or telephone for an application form quoting
the appropriate post ref. to CW Computer Staff, The Computer,
Cheshire, Cheshire, 091 428 8256/8 or POYNTON 877818 after 5pm
on weekdays.

Quadrant Recruitment Ltd.

100, Queen Street, Sheffield

The ambitions of programmers

LAST year Greater Manchester Transport, having completed the preparation of a five-year system development plan, set out to expand its systems and data processing department to take on the extra work. About 20 people were involved of all skills and grades — from programmer to system design manager.

Today, about a year later, recruitment is nearly complete, but it has taken the whole year to achieve this.

Most difficult of all was the recruitment of programmers. It was impossible to recruit programmers with about two or three years' experience. People with this level of experience in programming appear to offer themselves only for more senior posts such as programmer (in GMT's case) or even systems analyst.

Contacts with other people in the trade indicate that this is not unique, either to the North West or to public utilities and local authorities. It may, however, have something to do with salary levels and there is some evidence that although GMT pays slightly better than the median salary for programmers for this area this is not enough to retain

programmers with two to three years' experience in pure programming jobs.

Making a significant change in the salary for programmers, however, is not easy in a highly structured salary system such as public utilities use. The knock-on effect on the more senior grades is very difficult to cope with in such a structure.

In any case, only a limited number of programmers appear to want to stay in programming at any salary. Most prefer to start broadening their

The author, William Drynan, is systems and DP manager with Greater Manchester Transport.

skills as soon as possible and the subjective feeling among candidates we interviewed was that about two years was enough in pure coding.

To some extent this phenomenon repeats itself throughout the range of more senior posts. For example, many analysts of fairly limited experience were searching for project leaders' jobs rather than for better paid analysts' jobs. The general picture seems to be of a population which seeks a rate of promotion very much faster than in any other profession or occupation — which, may, in fact, be

dangerously fast.

A more welcome aspect of this, of course, was that many candidates presented themselves for the system design management posts. However, many of these have a narrow basis for successful development in such jobs. At this level, the abilities to recognise and deal with general business problems and to relate effectively to departmental and functional management are more important than the more mechanistic programming and systems analysis skills.

The majority of candidates lacked these additional skills and the rate of movement of people within DP together with the "sealed" nature of the occupation makes it difficult for those within to obtain such skills.

In addition to these general trends, there were a number of problems associated with the fact that GMT is a public utility located in the North West. Many candidates, especially for the more senior posts, expressed concern about the hierarchical rigidity and old fashioned style (as they

imagined them) of public utilities. This is more imaginary than real.

As someone having experience of both private industry and public utilities I do not find it to be so. Most candidates who were interviewed appeared to satisfy themselves quite quickly from the nature and content of the interview that this would not be a problem for them.

As to the second matter, many candidates from the South and the Midlands were apprehensive about things such as the price of housing, the level of educational services and even, in one case, the availability of non-violent soccer matches.

However, I do not think this problem is unique to those recruiting in the North West. It is much more likely that people who hold these opinions strongly simply do not apply for jobs in the area.

Certainly, my experience is of hearing more people state passionately that they would rather work in any other part of the UK than central London.

All in all, the problems encountered during the last year's recruitment effort were more those shared by all DP managers, than those specific either to the North West or to public utilities.

HEAD OF USER SUPPORT GROUP

The Daresbury Laboratory, located in the Cheshire countryside, is developing major national facilities for research into atomic, molecular, solid state and nuclear physics.

Exploitation of these facilities requires first-class computing support. Computers at the Laboratory include a CRAY-1, an IBM 370/185, GEC 4070s, PDP-11s and Interdata. We are looking for a person with broad experience of computing to fill the vacant post of head of the User Support Group. The work includes dealing with technical problems, liaison with users, preparation of accounting information and the production and updating of a large amount of documentation. The person appointed will have an ability to communicate with scientific computer users and understand their problems and requirements. Knowledge of IBM OS/MVT, TSO, FORTRAN and RPL/2 compilers would be an advantage.

Appointment will be made at Senior Scientific Officer grade, on the salary scale £5332 to £9705 per annum (under review). Applicants should possess a good honours degree in a relevant subject, plus at least four years relevant post graduate experience.

There is a non-contributory superannuation scheme, a flexible working hours scheme and a generous leave allowance. Closing date: 18th July 1980. Please write, or telephone Warrington (0925) 85000 Ext. 467, for an application form quoting reference DL/748/CW to:

Applications are welcome from both men and women.

WEST YORKSHIRE METROPOLITAN COUNTY COUNCIL

ASSISTANT
PROGRAMMER/ANALYST

POST REF. ES 19 003

LA 501-17 722

The Directorate's computer group in the Engineering Services Unit, will use the County 4MB IBM 3031 (plus July), through a network of scientific distributed processors and terminals including a Calcomp 7000 plotter, Ferranti digitiser and three Tektronix displays.

The group needs engineering, mathematics and computer science graduates to write cost effective programs for highways, structures, traffic, transportation, planning and engineering management. Introductory programming, graphics and microcomputer know-how is valuable and professional computing experience at Fortran, Cobol, Basic or Pascal is important.

Successful applicants pursuing professional status may qualify for accelerated progress to the senior officer scale. Chartered engineers and corporate members of the BCS will be appointed directly onto the senior officer scale (EG 638-L7 722).

Application forms from Directorate of Planning, Engineering and Transportation, Room 238, County Hall, Wakefield to be returned by 11 July, 1980. Telephone T. Endersby (Wakefield 87111, Extension 3515) for details.

(1677)

METROPOLITAN BOROUGH OF
Rochdale

Treasurer's Department

Rochdale Metropolitan Borough Council currently operates an ICL 2960 running under OME and plan an early implementation of VME/K. In order to fulfil an ambitious development/conversion plan the following position must be filled.

TECHNICAL SUPPORT
PROGRAMMER

APS ES, 573/ES, 381

The postholder will be responsible to the Operations Manager for all software aspects of the installation; and in particular, support of the operating systems, currently George II under OME. It is envisaged that conversion to KSV/17 will commence shortly with full implementation early in 1981. Ideal candidate should therefore be conversant with both 1900 software and the problems of a large scale operating system.

Removal expenses are payable and assistance with accommodation is available in appropriate cases. (Ref. No. D943)

Application form and further details available by quoting ref. no. D943 from the Chief Personnel Officer, P.O. Box 66, Floor 2, Municipal Offices, Smith Street, Rochdale OL16 1XG (Tel: Rochdale 47474 Ext. 682) to whom they should be returned by Monday, 7th July, 1980.

University of Petroleum and Minerals
Dhahran, Saudi Arabia

Our configuration consists of an IBM 3033 and an IBM 370/158 operating under VM/CMS-SPF, MUG/TSP-SPF and CICS with telecommunications/tele-processing networks. We now need the following:

SYSTEMS
PROGRAMMERS

With a B.Sc. degree, 3-5 years experience and a knowledge of Assembler and PL/I. Experience gained in a higher educational environment would be an advantage.

PROGRAMMER/
ANALYST-ACADEMIC/
RESEARCH SUPPORT

With a scientific or engineering B.Sc. together with Fortran and/or PL/I experience. A working knowledge of HSL, SSP or any of the following packages is desirable: CHESS, ICES, STRUOL, CSMP. The job will involve CAD and interactive graphics support as well as consulting and development.

ADMIN. D.P. SUPPORT

With a B.Sc. degree and 3-5 years experience in business D.P. The work will involve systems development and maintenance using CICS and VSAM.

The University offers regular renewable 2 year contracts, tax free competitive salaries and allowances, plus air transport to and from Dhahran for each 2 year tour. Housing in kind will be provided if available, otherwise a cash allowance will be made for outside living. There are 45 days paid vacation and generous holidays.

Please apply as soon as possible with a detailed C.V. including home and office addresses and phone numbers to: University of Petroleum and Minerals, c/o Gabbalas-Thring Services Limited, Broughton House, 6, 7, and 8 Backville Street, London W1X 2BR. Tel: 01-734 0161.

4080

The hottest number
in software support

Among computers designed for real-time applications, the GEC 4080 is acquiring something of a star reputation. In our opinion, that reputation is wholly justified. We should know—we've just invested over £1 million on six 4080's to form the basis of a new internal bureau. The installation has a total of 50 terminals, and provides all the back-up needed by a large scale software engineering group, working on highly advanced real-time applications.

To maintain and extend the services we offer our "Customer", we now need a number of men and women—at team leader, and more junior levels—to maintain, develop and up-date the systems software with particular emphasis on its integrity.

You'd also be involved in the development of new systems software such as utilities, macros and libraries.

For the team leader's role, you'll need at least three years' relevant experience; for the other roles, less experience is acceptable. Experience with GEC Series 4000 computers will obviously be an advantage.

If you like the idea of software support in a real-time scientific environment, Chris Hill can tell you how to find out more.

Why don't you phone him on 01-953 2030 extension 3449.

Alternatively, write to him at Marconi Avionics Ltd, Elstree Way, Borehamwood, Herts WD6 1RX, or telephone 01-207 3455 anytime. Please quote reference MA 80/28.

COMPUTER WEEKLY

the newspaper computer people rely on for

APPOINTMENTS

And there are five good reasons why recruitment advertisers
rely on it, too.

92,000 PLUS CIRCULATION.

The largest in the field—and continually growing. It's rigorously controlled and updated to ensure maximum coverage of key computer personnel.

MORE REQUESTED COPIES.

Almost all readers either personally request or buy their copies—a claim no other computer journal can make.

HIGH QUALITY EDITORIAL.

A recent independent survey showed that Computer Weekly is considered the best journal for news—and the best medium for jobs—at all levels of the industry.

REGIONAL RECRUITMENT FEATURES.

They are editorially supported—and appear regularly.

HIGH RESPONSE RATE.

Even in today's tricky computer recruitment situation, a high response is regularly reported by advertisers.

FOR RESULTS RECRUIT

COMPUTER WEEKLY

Manchester 061 228 2421
London 021 366 4838

Don't miss it! Subscribe today! Computer Weekly is the only computer journal that gives you the names and addresses of the people who can help you get the job you want.

Here today,
gone
tomorrow

The computer systems a company invests in today will be outdated in a year or two, possibly obsolete in five. Yet few computer users have the resources or the justification to update continually—so you, as a professional programmer, have to move companies to keep in touch with changing technology and techniques.

But there's a better way to keep abreast of the industry: with Data Logic's Professional Services Division. As one of Britain's leading software houses, we're in a position to specify and implement the very newest ideas on every assignment for industry and commerce, finance and government clients. We specialise in large-scale, multi-size or multiprocessor systems which often call for a selection of different

equipment makes and for very advanced programming techniques. We've even specified completely new languages to meet specific client needs—you can't get more ahead of your time than that!

You'll earn between £6,000—£10,000 depending on your experience plus profit share and travel expenses—you must be prepared to spend much of your time on customer sites, from a Greenford base.

Either write with full career details, or telephone for further information, to: Barbara Hawkins, Personnel Department, Data Logic Limited, Westway House, 320 Ruslip Road East, Greenford, Middlesex UB6 9BH. Tel: 01-578 9111. Alternatively telephone our 24 hour answering service on 01-235 1535 for an application form.

FOR
ALL OUR
RECRUITMENT
ADVERTISERS

An exclusive opportunity to pioneer in the most advanced recruitment medium of the 80's

We invite you to join us in pioneering what may well be the biggest breakthrough in computer recruitment history.

IPC Electrical-Electronic Press Ltd. have launched a Prestel Viewdata appointments service for computer personnel — the first of its kind — and Computer Weekly advertisers are being given an exclusive opportunity to use it.

For just £75 extra, any position advertised in Computer Weekly will also be announced on Prestel screens for five days. The screen announcements will contain the main details given in the Computer Weekly advertisement. And this special computer appointments service will have its own key access number on Prestel.

The Prestel information service is now available in public libraries, universities and computer centres across the country — and many key computer personnel are already regular users. Your advertisement will be telecast on Prestel the day we receive it — up to six days before it appears in Computer Weekly itself — which could enormously increase the speed of response as well as the number of replies.

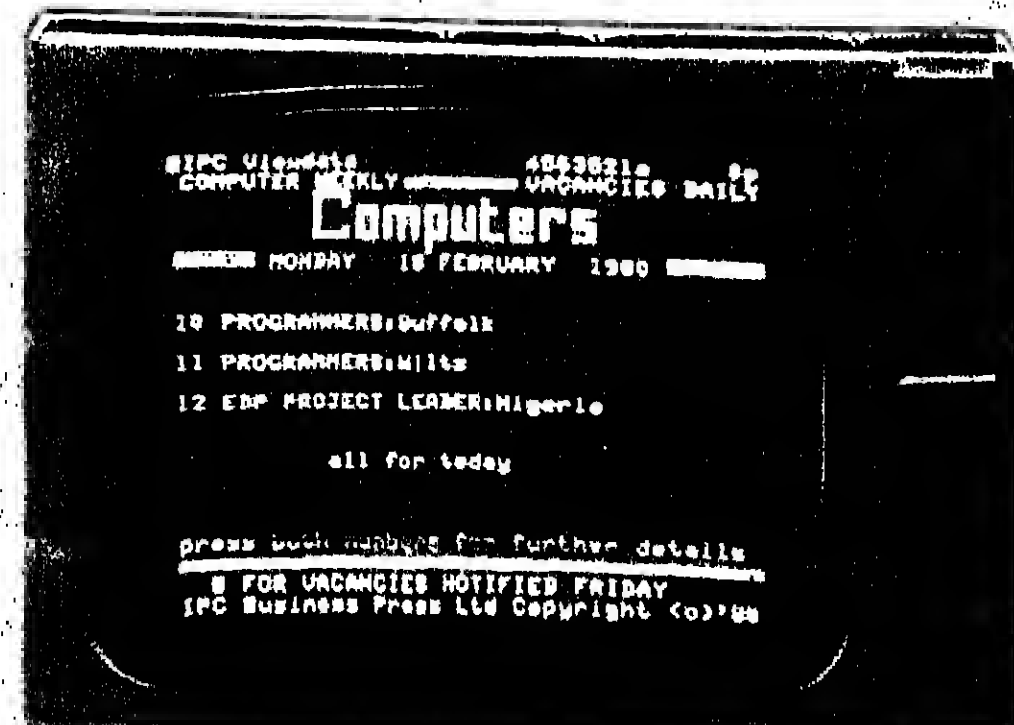

Start your 1980s recruitment programme by harnessing the key information medium of the new decade. Contact Brian Durrant, Classified Advertisement Manager, IPC Electrical-Electronic Press Ltd., Dorset House, Stamford Street, London SE1 9LU. Tel: 01-261 8597.

COMPUTER WEEKLY

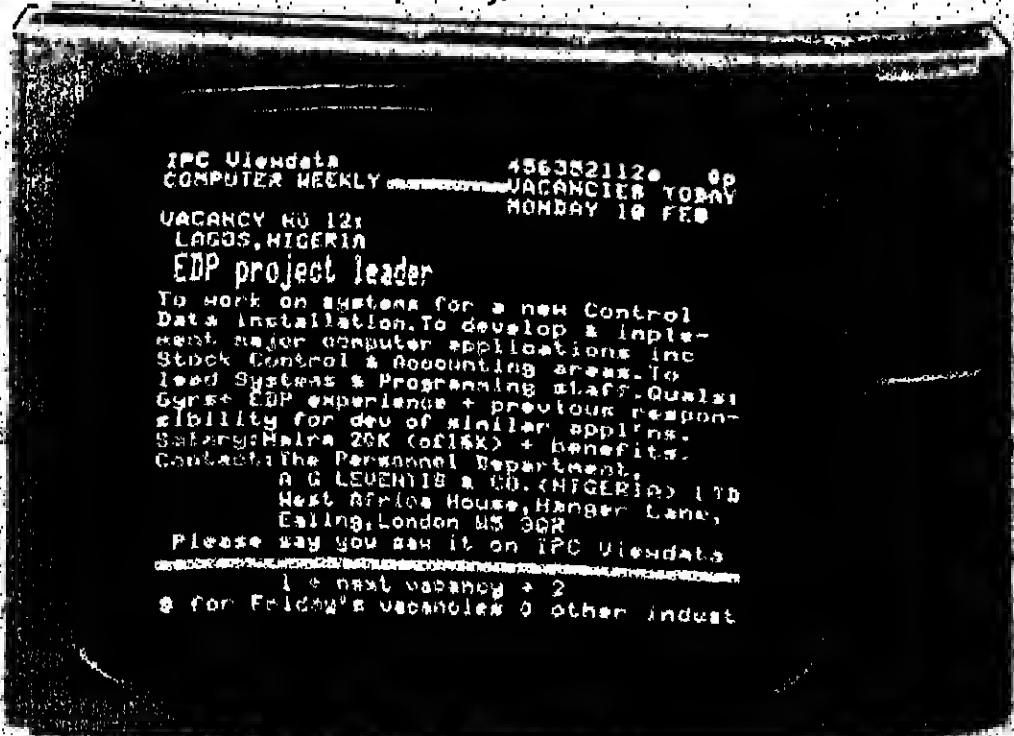

In association with IPC Viewdata

Note: A parallel service is available to Electronics Weekly recruitment advertisers.

HOW IT WORKS

On dialling the computer appointments number, applicants are immediately informed what jobs are available for the day, and given a key number for each. They can also obtain details of the previous four days' vacancies, so that each job is in effect on offer for a working week, at a cost to the advertiser of only £15 per day.

On pressing the specific job's key number, applicants are given full details of the vacancy (if there's room, all the details that you have in given in your appointment card) including how, where and when to apply. This amounts to a 5-day recruitment campaign, screened to a highly select audience.

GW Prize Crossword No 5

SOLUTION

WINNER of Computer Weekly Prize Crossword No 5 is Colin Morris, credit controller with wholesale stationers J. A. Magann of York. He receives the first prize of £10. Second prizes of £5 each go to Garry Luekley, an aircraft designer with British Aerospace, and Rachel Britton who works in the computer section of the Engineering Department at Cambridge University.

Prize Crossword No 6 will be published next week, July 3

SOFTWARE DESIGNERS

with communications or man-machine interface experience, for new project in Surrey. Contract or Permanent. Crowthorne 77821 or 3370 day. Farnborough (Hants) GU14 0JN. 48083 eve./wknd.

ANALYSTS/PROGRAMMERS/CONSULTANTS

PIM/UNICOM are two small consultancy companies working together in diverse problem areas such as micro computer based turnkey application systems, commercial (COBOL/FORTRAN) systems, forecasting, linear programming, etc. They are currently involved in projects in Belgium, Italy and Ireland, as well as in the U.K.

They have a requirement for a numerate graduate to work in several of these problem areas. The candidate should have a knowledge of COBOL and structured programming techniques. The companies offer good career development prospects. A micro computer is available for hands on use and various computer bureau facilities are used as and when required.

Salary Negotiable: £6,000-£10,000.

THE SALES BIT

Selling in a recession

AS I have said in this column many times before, the difference between sales success or failure is often no more than an attitude of mind.

The winning of the order often depends on the ability of the salesman to sustain a positive stance within the sales situation rather than become involved in the negative dialogue of all the reasons why success is unlikely. Once again we are apparently entering a period of worldwide economic recession. I have always believed that there is nothing more likely to create economic recession than politicians and economic pundits forecasting that we are about to have one.

One could almost believe that economic recession is a standard product of Rent-a-Disaster, a service company specialising in the provision of calamities that appear to justify the government of the day and sustain full employment for MPs. But I digress!

In periods of impending or existing economic decline the buyer is given the best excuse in the book for not buying, and for many salesmen such excuses provide an ideal excuse, not only for failure, but also for not getting out in the street and even trying to sell.

What actually happens to the buying process during times of recession? Clearly it depends on the type of product one is selling. Luxuries are obviously harder to sell than essentials.

However, it is fair to say that almost no market dries up altogether; there is always business around somewhere.

It is in this kind of environment that the determination to get out there and win enables some salesmen to shrug off the apparent limitations of economic recession and still make sales quota, while others sit in their offices whining over copies of the Financial Times, cursing the fates for their ill fortune.

One can argue quite convincingly that any service or equipment designed to promote efficiency must have greater justification in times of industrial restraint than during economic boom. If savings are to be made they can only be achieved by increased productivity and not by putting up the shutters and hoping the problem will go away. It is an argument that needs a resolute and determined mind. But it has always been the salesman's responsibility not only to persuade the buyer to purchase his product as opposed to that of a competitor, but also to provide the justifications for the type of product concerned in terms of cost/benefits in the context of prevailing circumstances.

Often the promise of

recession can provide an ideal opportunity for the salesman to close an extended negotiation: "Now that there is some likelihood of economic difficulties that could affect your industry quite considerably, it is most important that you take every possible step in raise your efficiency to the highest level in order to ensure survival in what will be an increasingly competitive marketplace. A decision to proceed now, while funds can still be made available, will avoid a possible situation where you are in urgent need of increasing efficiency without the ability to fund it."

You could be selling anything — photocopyers to aero-engines, vending machines to computers. The argument is still the same.

When it comes to selling any non-luxury product, the buyer's use of a statement that sounds anything like "I cannot make a decision because of prevailing economic circumstances" is not providing a reason; he is making an excuse.

TRADER

Fortronic moves south

FORTRONIC of Dunfermline, Manxman Tally distributor in Scotland, is to extend its territory south of the border to become the exclusive sales and service agent for Northumberland, Cumbria, Durham, Tyne & Wear and Cleveland. An office is to be opened in Newcastle.
